05 Free Plan & Upgrade
06 Daily Use
07 Inlay Care

45 screens · 7 stages

inlay HEALTH

The journey end to end

Seven stages. The patient is never asked to do work the record can do for them.

01

ACTIVATE & SIGN IN

From the clinic's invitation email to a signed in patient, with one code.

1 2 3 4

02

IDENTITY & CONSENT

Confirm the clinic's details, then one consent before anything is read.

5 6 7

03

ONBOARDING

Your why, in a conversation, then the record builds in front of them.

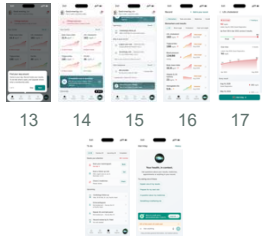

8 9 10 11 12

04

DASHBOARD

The free record: what needs them, trends, to do and Ask Inlay.

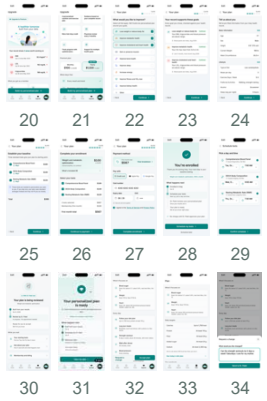

13 14 15 16 17

18 19

05

FREE PLAN & UPGRADE

Goals to payment to Dr. Patel's review, then accept or ask for a change.

20 21 22 23 24

25 26 27 28 29

30 31 32 33 34

06

DAILY USE

Yesterday's score, today's plan, progress, photographs and the projection.

35 36 37 38 39

07

INLAY CARE

Free surgery support, alongside Longevity Care, which stays paid.

40 41 42 43 44

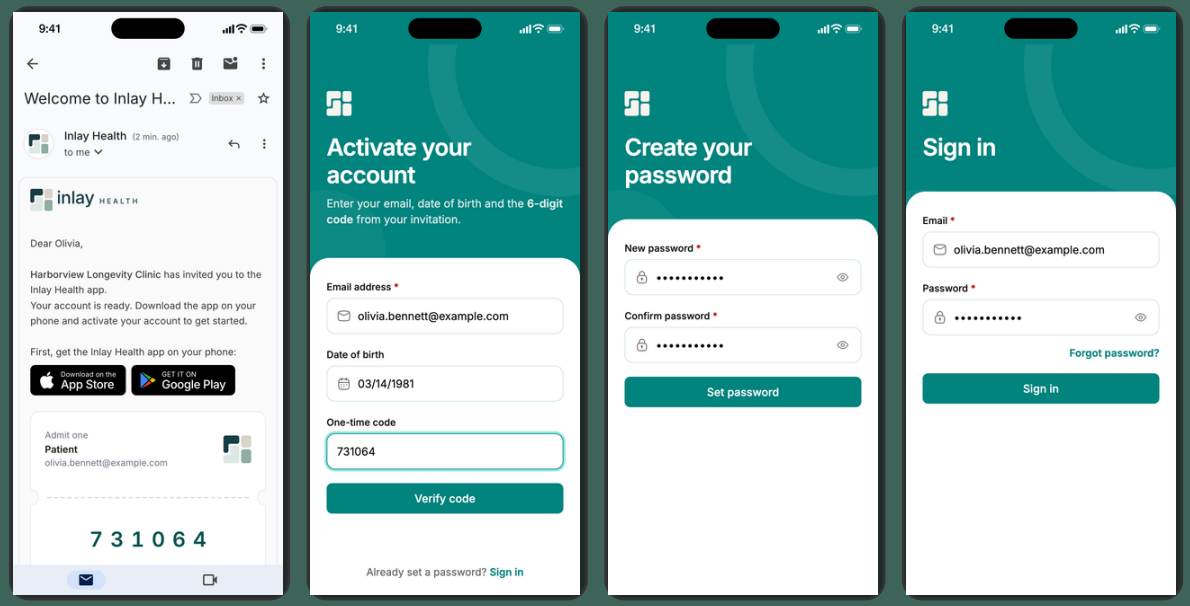

45

STAGE 01

Activate & Sign In

Four screens from the invitation email to a signed in patient. The clinic sends one code; the patient never invents a username or waits for a call.

Screens 1–4

1 2 3 4

inlay HEALTH

STAGE 01 · ACTIVATE & SIGN IN

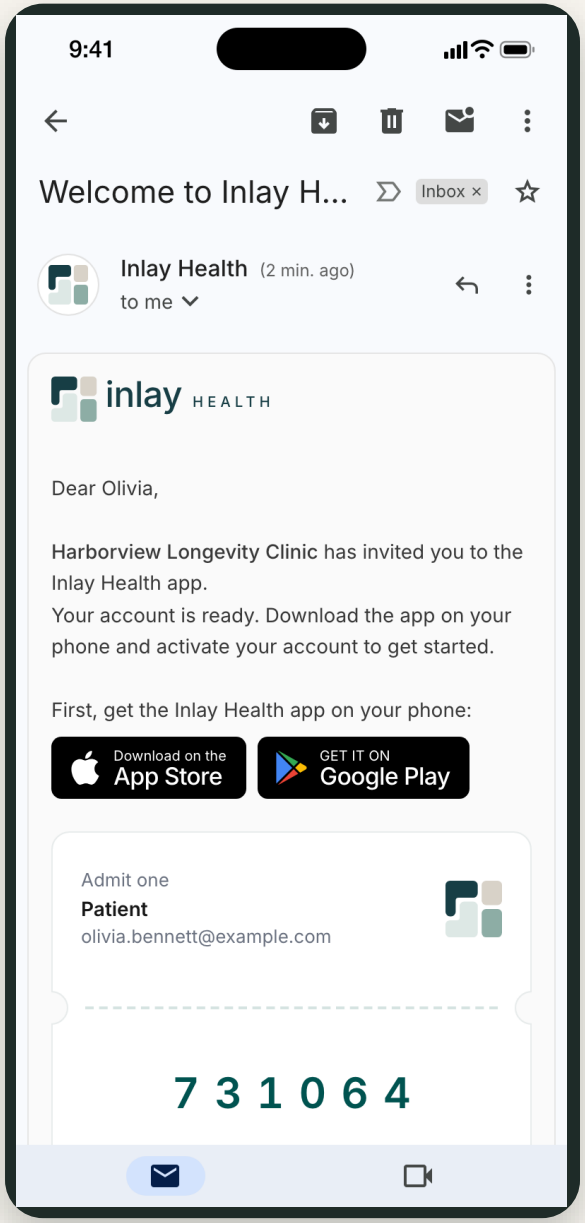

01

Invitation Email

One email, one code

The clinic invites the patient from the portal. The email carries the store links and a six digit activation code, and nothing else: no link to click, no ID, no password.

- Sent in the clinic's name: Harborview Longevity Clinic invites Olivia, signed by its clinic manager
- The admit one card names the patient, the email and the code 731064, valid once, for 48 hours
- A code that runs out is replaced by the clinic, so help stays with the practice the patient knows

inlay HEALTH

02

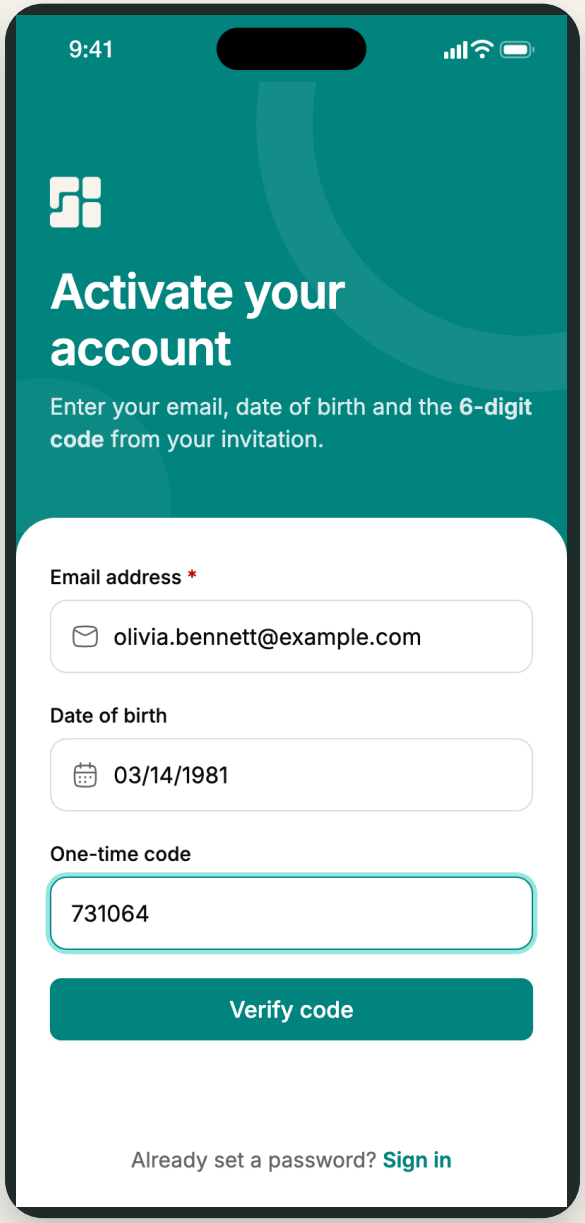

STAGE 01 · ACTIVATE & SIGN IN

Activate Your Account

Email, birth date, one-time code

The code is checked against the email and date of birth the clinic already holds, so a code on its own cannot open anyone’s record.

- Three fields and one button; the code is verified as soon as the sixth digit is typed
- Date of birth is the second check, taken from the practice record rather than invented at sign up
- “Already set a password? Sign in” keeps returning patients off this screen

inlay HEALTH

03

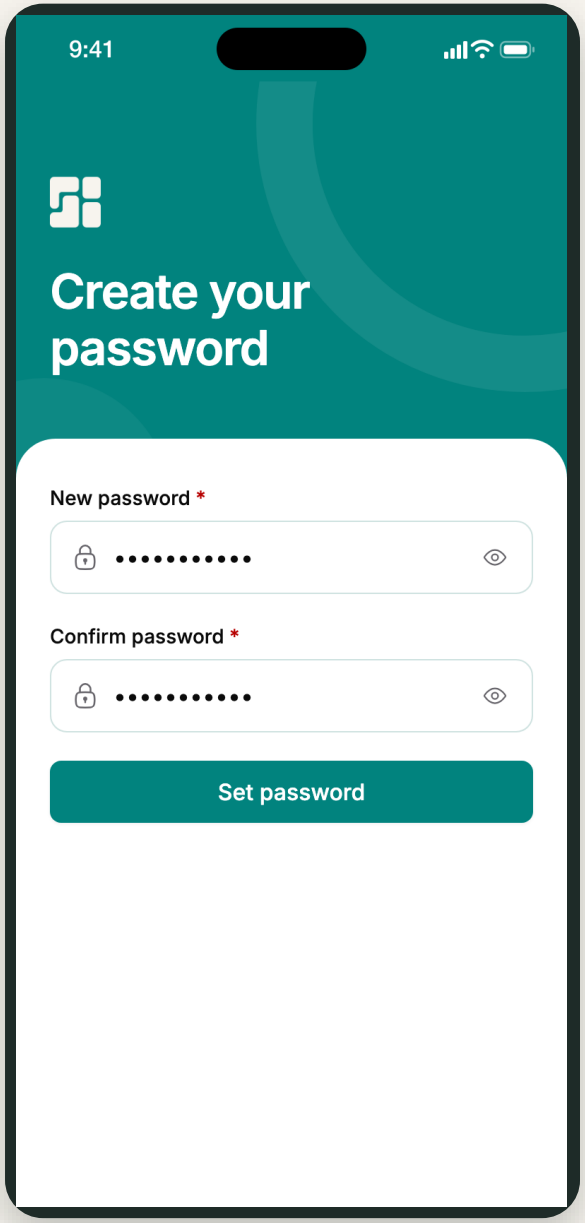

STAGE 01 · ACTIVATE & SIGN IN

Create Your Password

The only thing the patient chooses

Once the code is accepted the patient sets a password, with the same rules as the web portals. There is no username to invent and no second factor to set up.

- New password and confirmation, each with show and hide
- Going back cancels the code, so a half finished activation cannot be reused
- Face ID is offered later, from settings, once the patient is signed in

inlay HEALTH

04

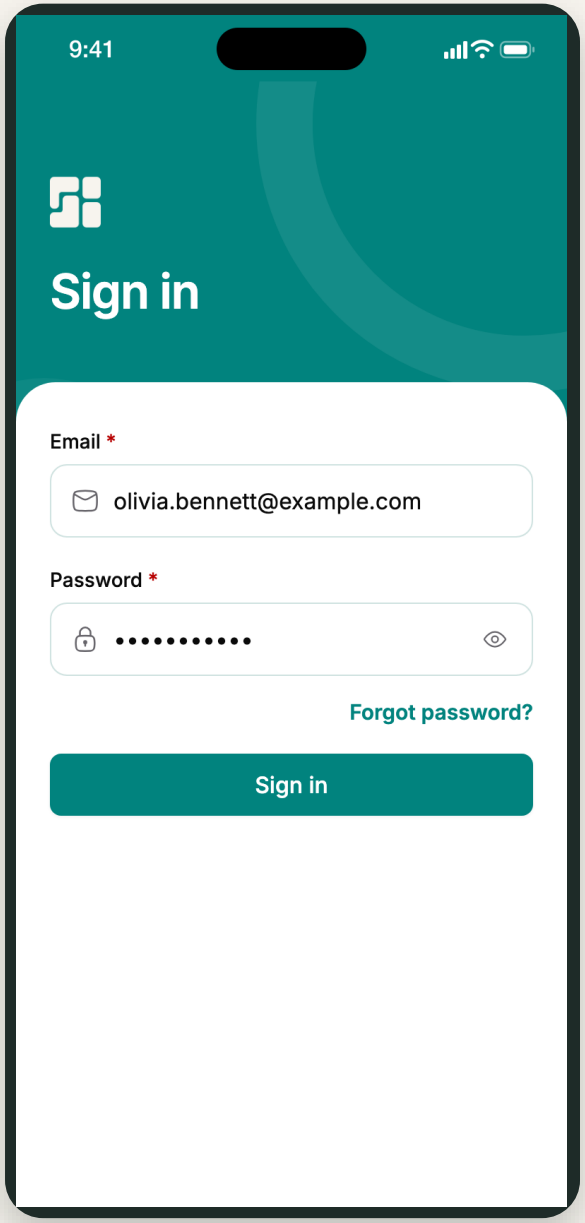

STAGE 01 · ACTIVATE & SIGN IN

Sign In

Straight back in

Straight after the password is created the email is already filled in, so the new password is all there is to type.

- Returning patients land here too: email and password, or Face ID once it is turned on
- Forgot password sits under the field rather than behind a menu
- A session left idle for 15 minutes comes back to this screen

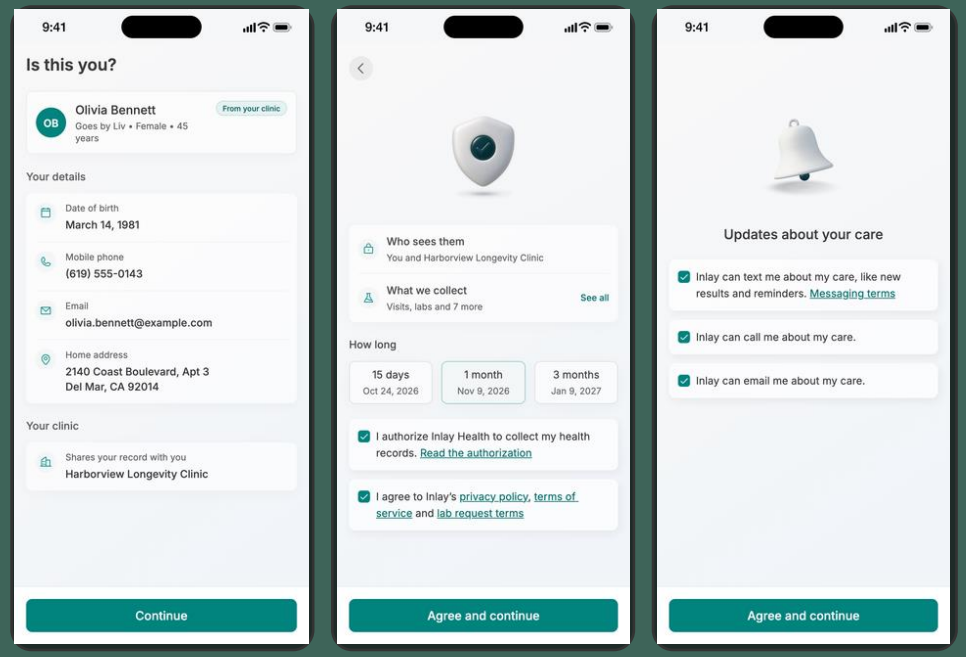

STAGE 02

Identity & Consent

The patient confirms who they are from the clinic's own record, then gives one consent before anything medical is read.

Screens 5–7

5 6 7

inlay HEALTH

05

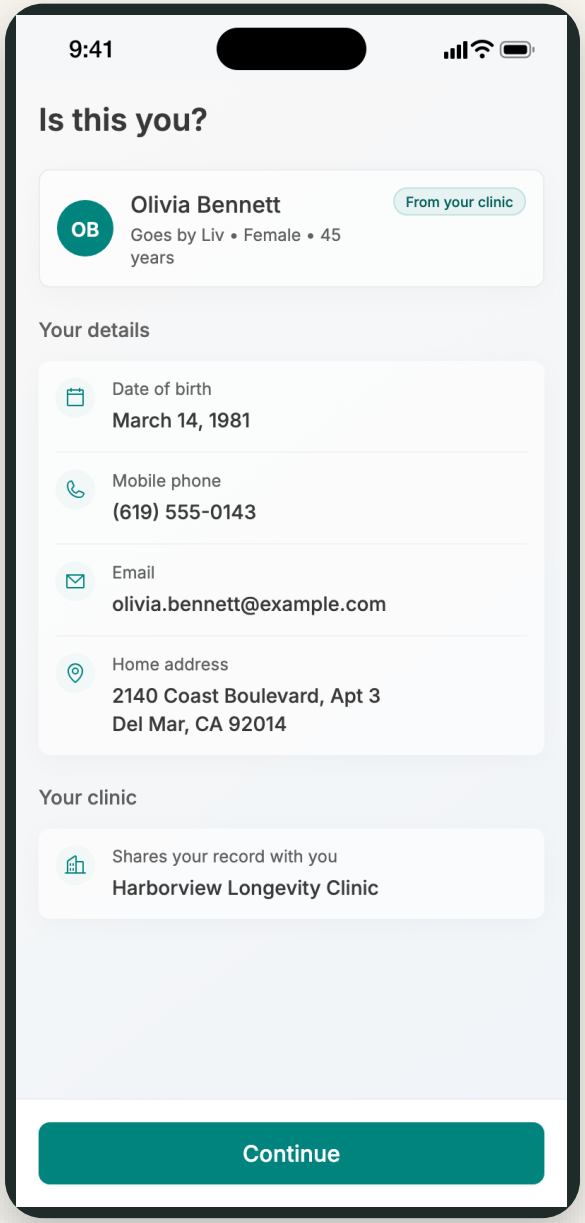

STAGE 02 · IDENTITY & CONSENT

Is This You?

Confirm, don’t type

The details come from the clinic’s record and are shown view only. They are what the national networks match the patient on, so they have to be the practice’s own.

- Name, preferred name, sex and age first: who the patient is, the way they would recognise themselves
- Date of birth, mobile, email and home address, then the clinic that shares the record
- A From your clinic tag says where every field came from; one action, Continue

06

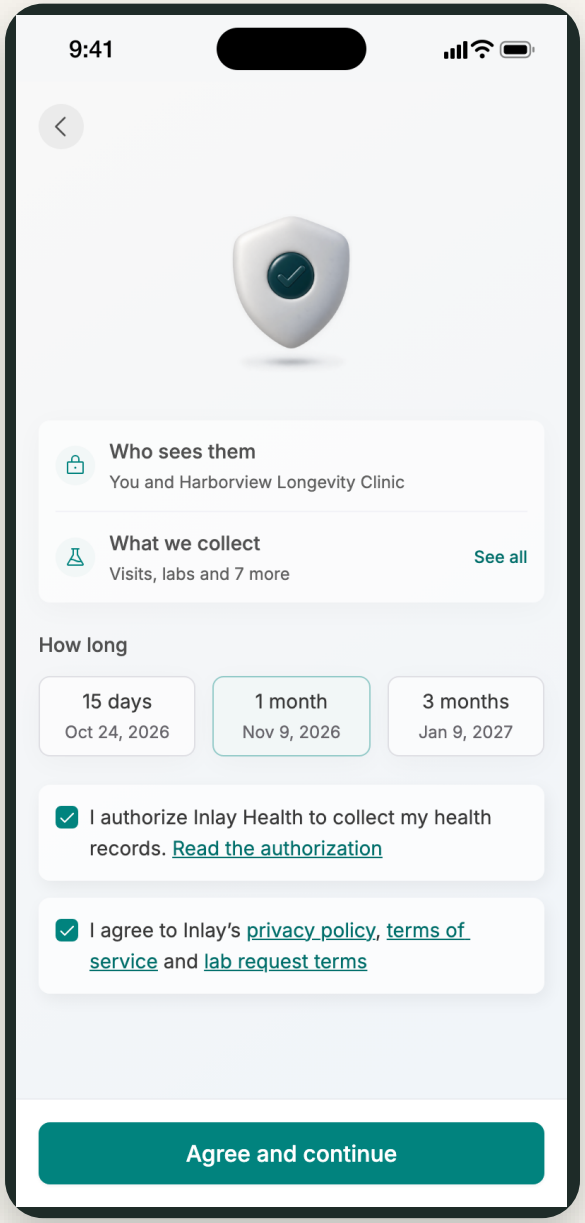

STAGE 02 · IDENTITY & CONSENT

Connect Your Health Records

Consent comes before any data

Nothing medical is read until the patient agrees. The screen says who sees the records, what is collected and for how long, in three lines rather than a legal page.

- Who sees them: the patient and Harborview Longevity Clinic. What we collect: visits, labs and 7 more
- The patient picks how long: 15 days, 1 month or 3 months, each with its end date
- Two boxes, the authorization and the terms, with the full text of each one tap away

inlay HEALTH

07

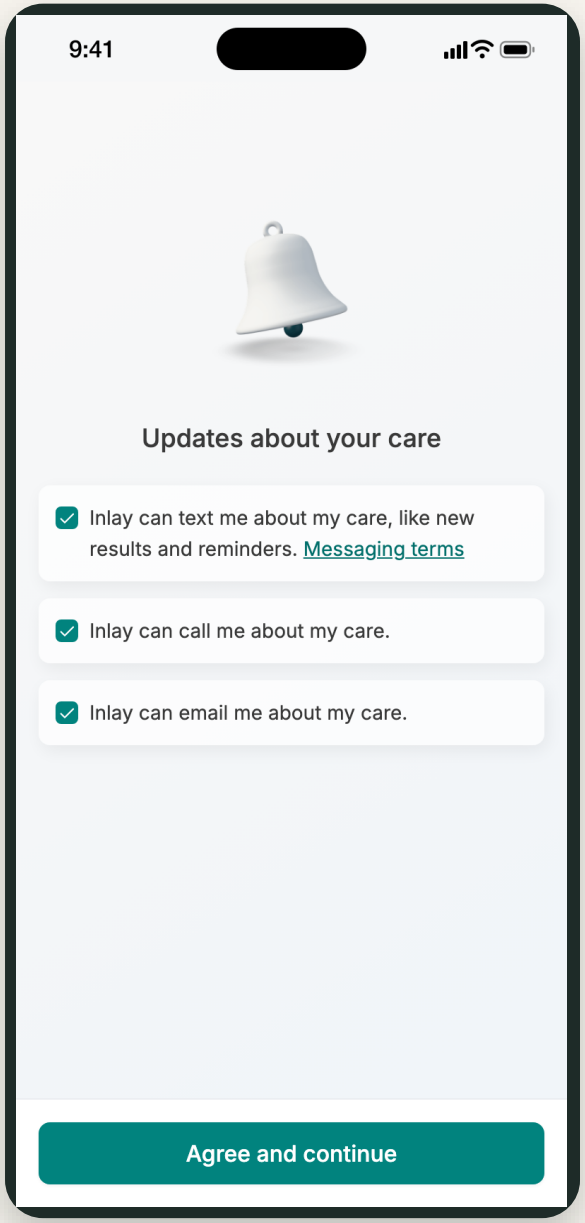

STAGE 02 · IDENTITY & CONSENT

Updates About Your Care

How Inlay may reach them

The second consent page covers contact about care: texts, calls and email. Agreeing here signs the consent and starts the record pull.

- Three separate permissions, so a patient can take texts and decline calls
- Messaging terms are linked from the text option, where carriers expect them
- Agree and continue goes straight into the assistant’s first conversation

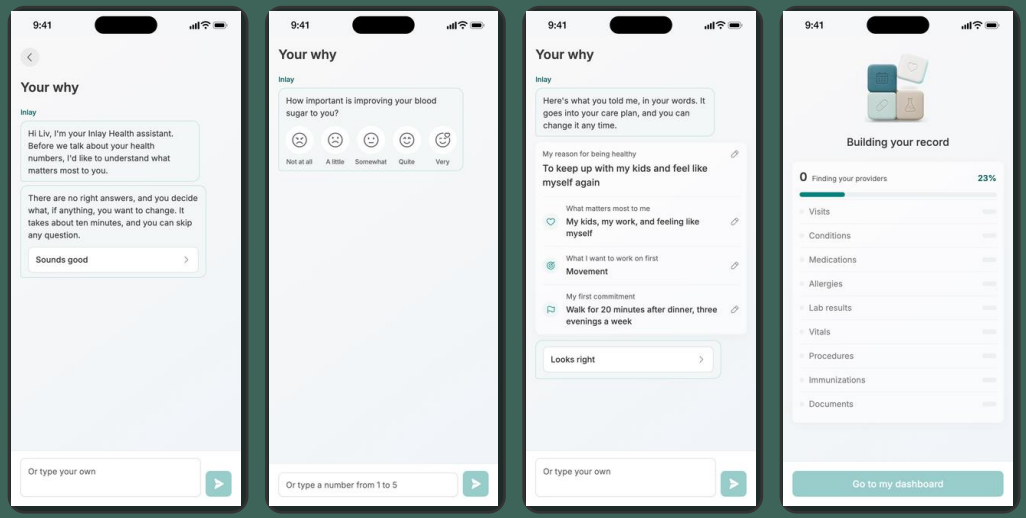

STAGE 03

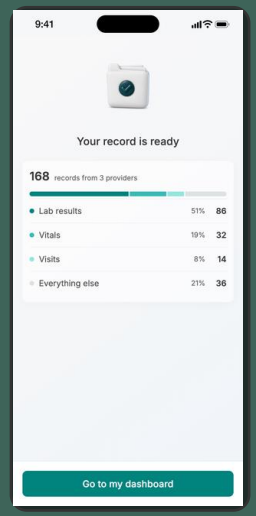

Onboarding

The assistant asks what matters before it shows a single number. Then the record builds while the patient watches.

Screens 8–12

8 9 10 11

12

inlay HEALTH

08

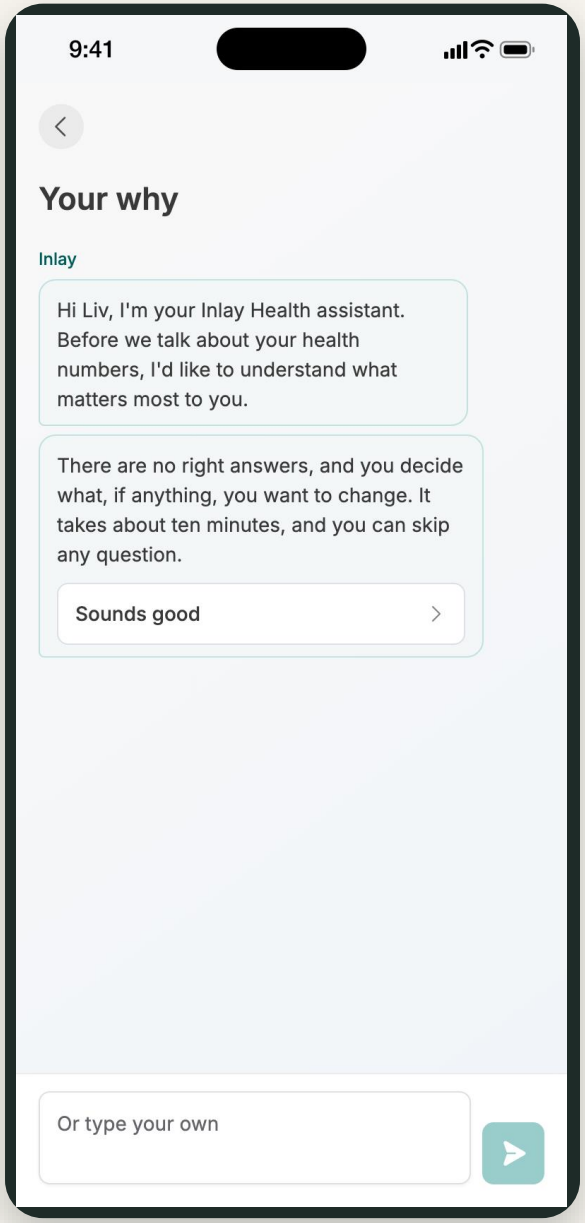

STAGE 03 · ONBOARDING

Your Why

What matters, before any numbers

The assistant opens with the patient's life, not their results. It is a conversation rather than a survey: every question can be answered in a tap, typed, or skipped.

- "There are no right answers" and "about ten minutes" set expectations in the first message
- Quick answers sit inside each question, and the chat bar stays on screen at every step
- Built on motivational interviewing, so the plan later rests on the patient's own reasons

inlay HEALTH

09

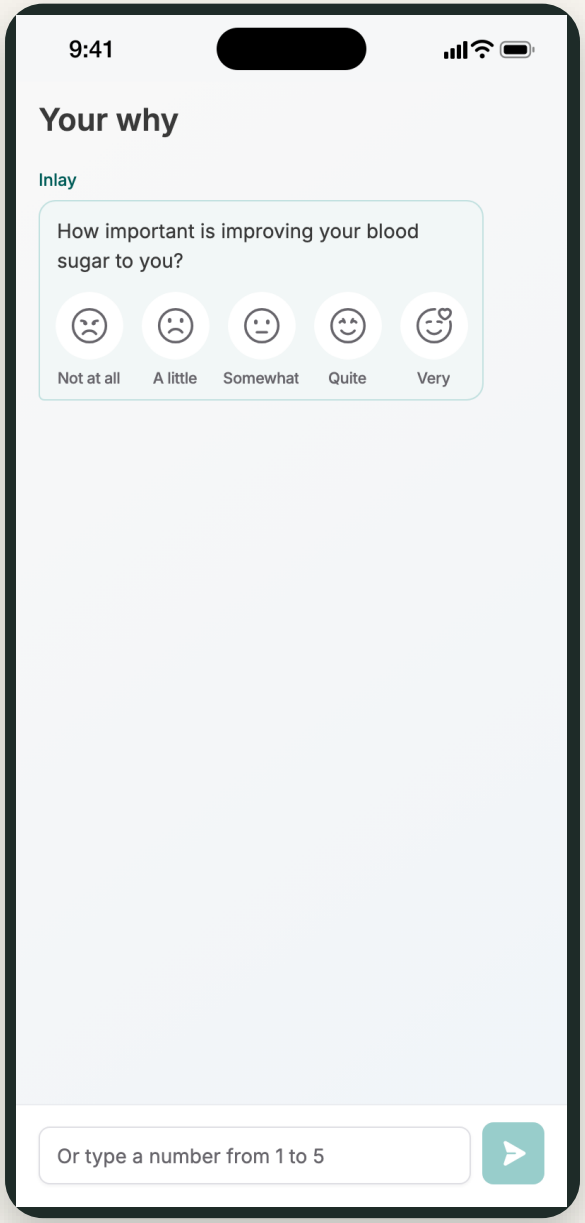

STAGE 03 · ONBOARDING

Your Why: Importance

How much it matters, on their scale

Midway through, the assistant asks how important a change is and how confident the patient feels, on five faces from Not at all to Very.

- Asked about the patient’s own concern, here blood sugar, which the record shows rising
- A follow up asks why this answer and not a lower one, which draws out reasons rather than excuses
- Readiness is asked the same way, and sets how softly the free app later mentions a plan

inlay HEALTH

10

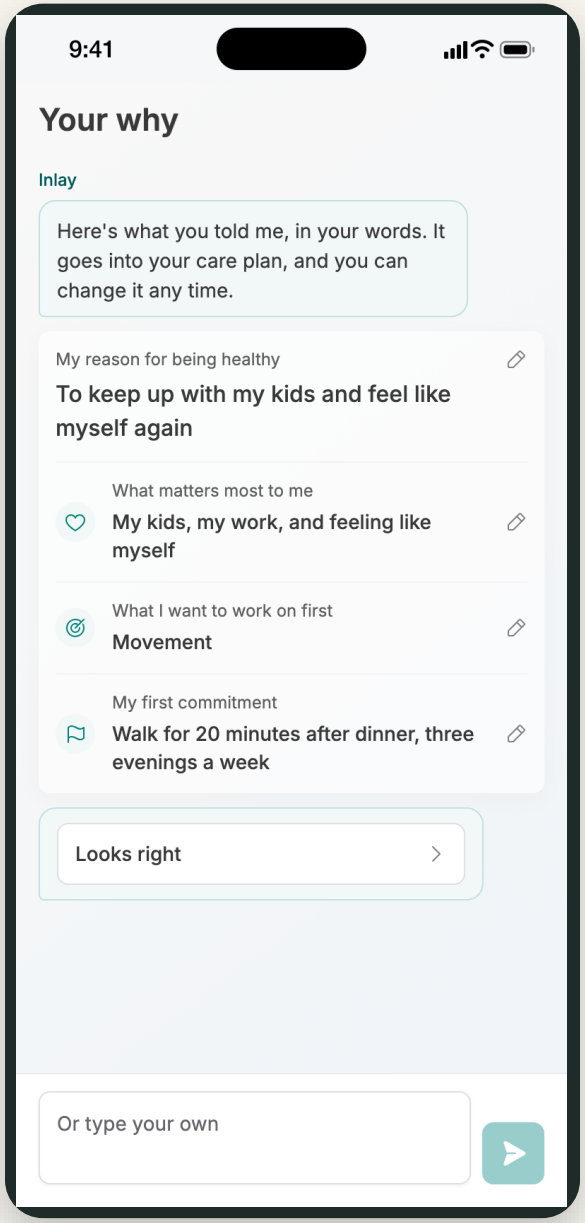

STAGE 03 · ONBOARDING

Your Why Card

Their reasons, in their words

The conversation ends on one card: the reason for being healthy, what matters most, what to work on first and a first commitment. Every line can be edited.

- “To keep up with my kids and feel like myself again” is quoted back, not paraphrased
- The first commitment is specific: walk for 20 minutes after dinner, three evenings a week
- The card goes into the care plan, and the Human Flourishing Index follows it

inlay HEALTH

10a

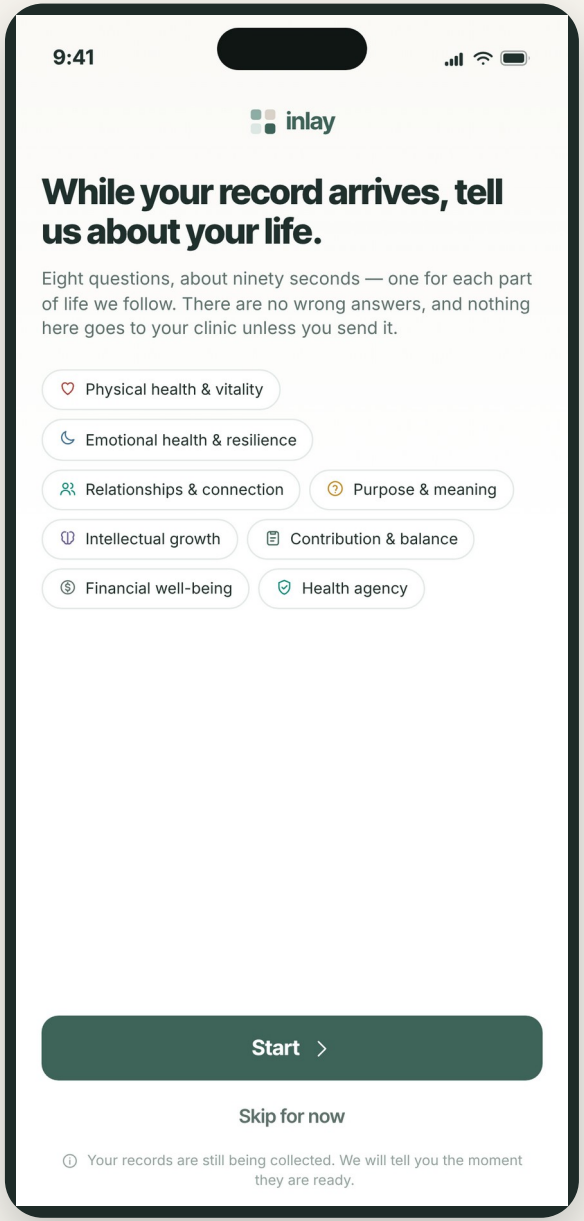

STAGE 03 · ONBOARDING

Flourishing · Invitation

Ninety seconds, while it pulls

The record pull takes minutes and the patient is sitting there. Eight questions, one for each domain, fill that wait instead of a progress bar.

- The eight domains are named up front as chips, so the patient sees the whole shape before answering anything
- Nothing here reaches the clinic unless the patient sends it — at this point they may never pay, and are told so
- Skip for now and a line saying the records are still arriving, so neither path is a dead end

inlay HEALTH

10b

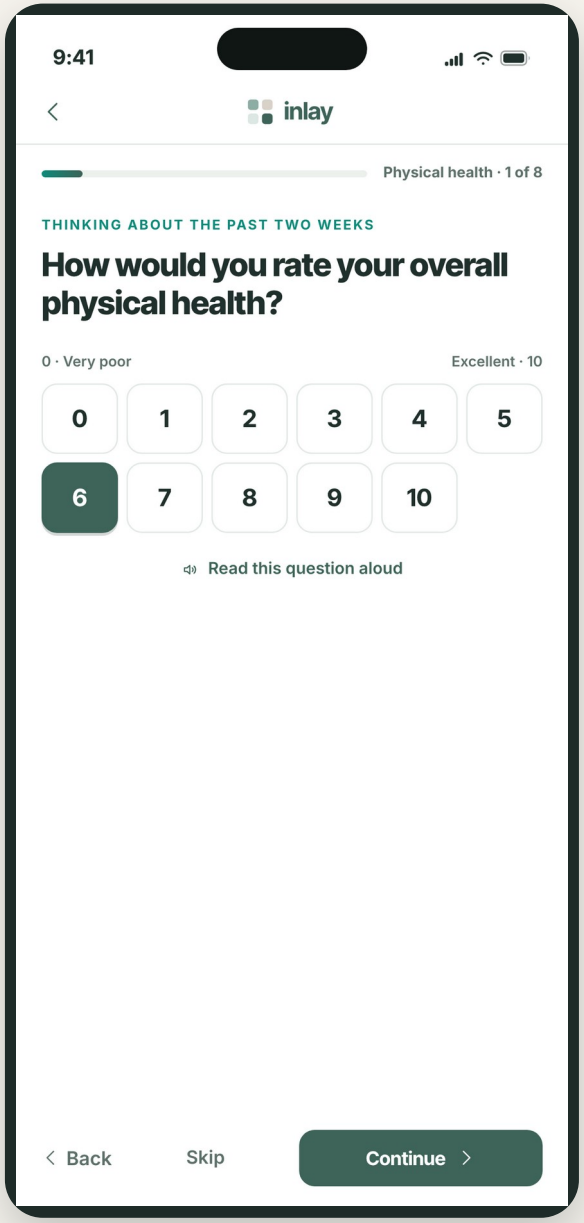

STAGE 03 · ONBOARDING

Anchor Question

One question, one domain

Each domain gets its single strongest item, on the same 0 to 10 scale. The window is the past two weeks and it never changes.

- Eleven buttons across 390 points gives 32 each; six and five gives 59, above the 44 point minimum
- Read this question aloud sits under every question — the whole instrument can be heard rather than read
- Skip is as prominent as Continue; a skipped domain reads as not answered, never as a low score

10c

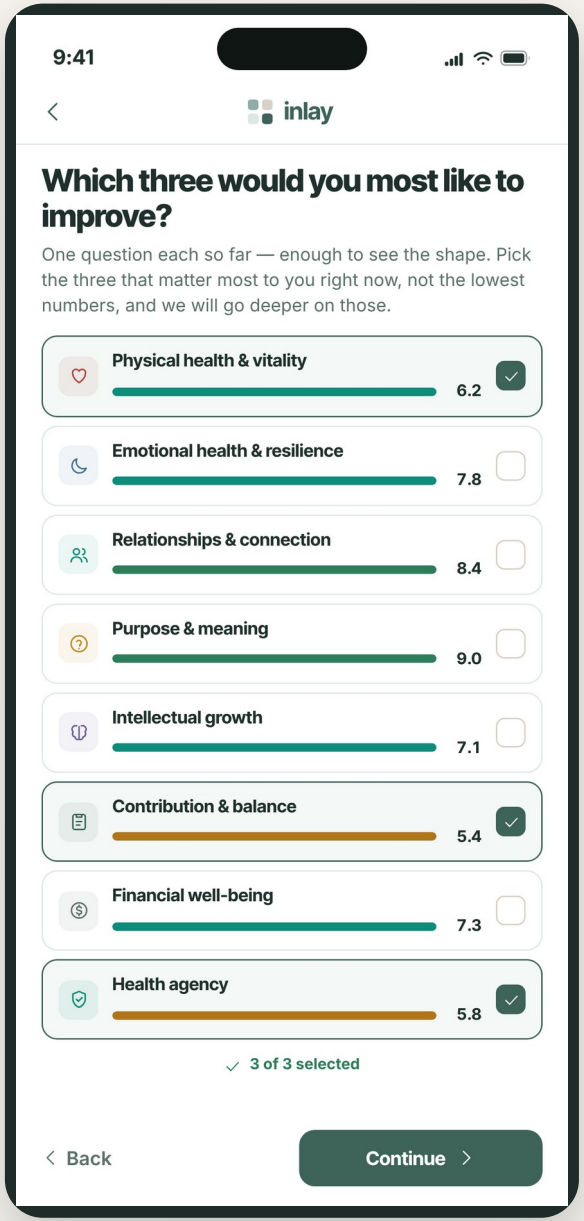

STAGE 03 · ONBOARDING

Pick Three

The shape, then the choice

All eight readings at once, then the patient picks three to work on. Low is not the same as wanted, so the lowest three are not preselected.

- Scores are banded rather than ranked: strength, doing well, opportunity, priority area
- The screen says one question each so far, so the number is never presented as more than it is
- The three picks drive the plan, the monthly check, and which domains are deepened first

inlay HEALTH

11

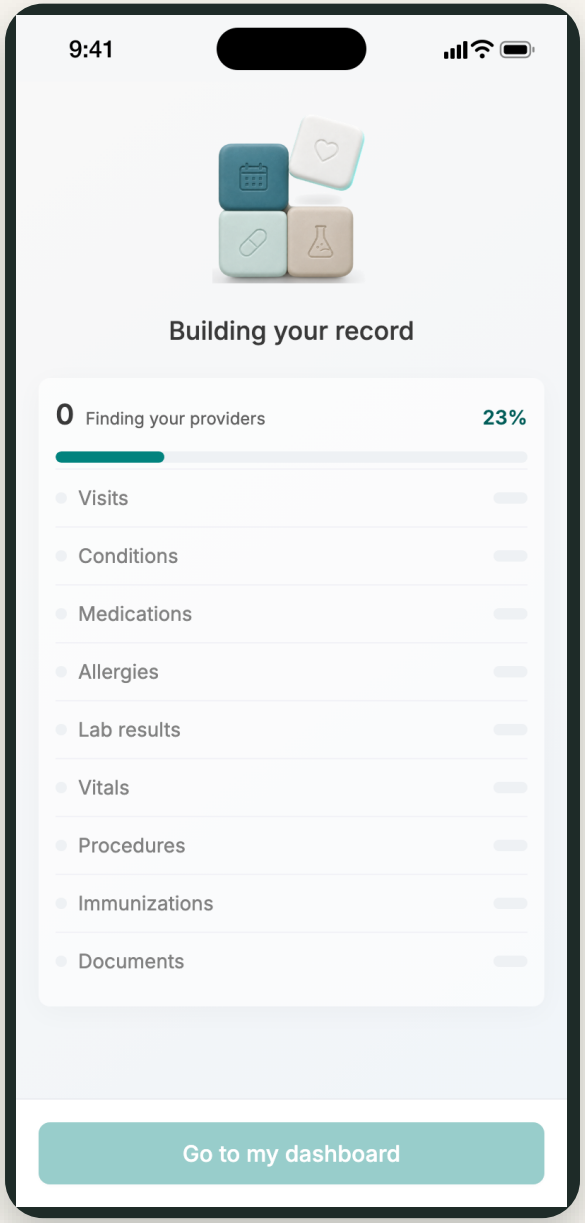

STAGE 03 · ONBOARDING

Building Your Record

The record builds in front of them

Consent starts the pull from every provider the networks find. The screen tells it the way a patient thinks about it: a running count, one bar, then each kind of record landing.

- Finding your providers first, then visits, conditions, medications, labs, vitals and the rest
- The real pull can take minutes, so the patient may leave and is told when it is ready
- Go to my dashboard stays off until there is something to show

inlay HEALTH

12

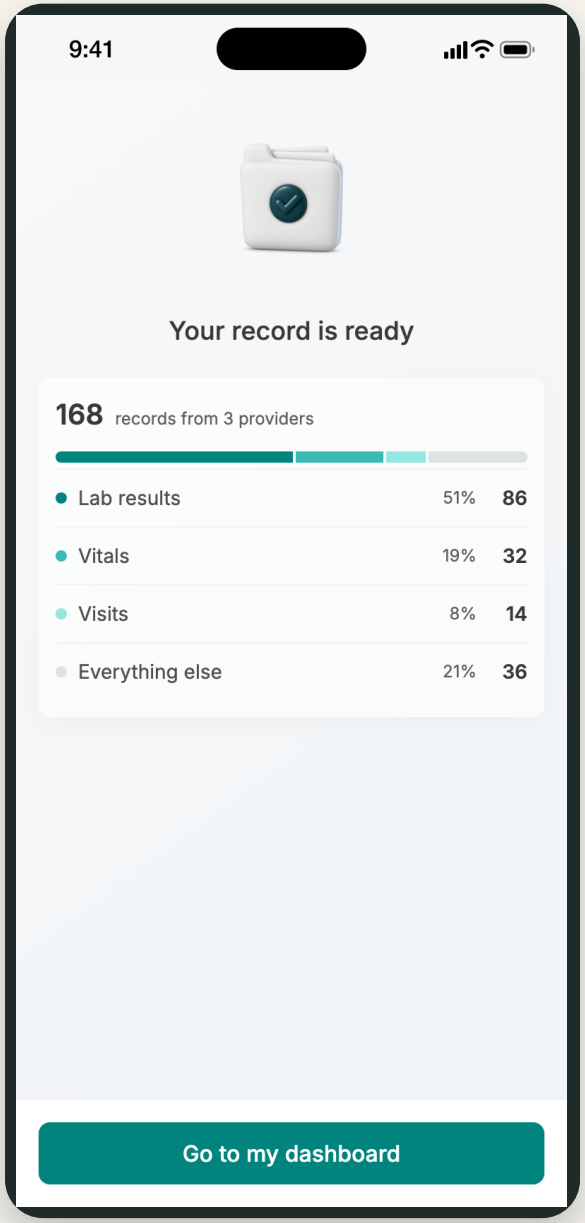

STAGE 03 · ONBOARDING

Your Record Is Ready

168 records from 3 providers

The finished record is summarised before the dashboard opens, so the first thing the patient learns is how much of their history Inlay already holds.

- Lab results 86, vitals 32, visits 14 and everything else 36, each with its share of the total
- Three providers found, including care outside the patient's own clinic
- One action: Go to my dashboard

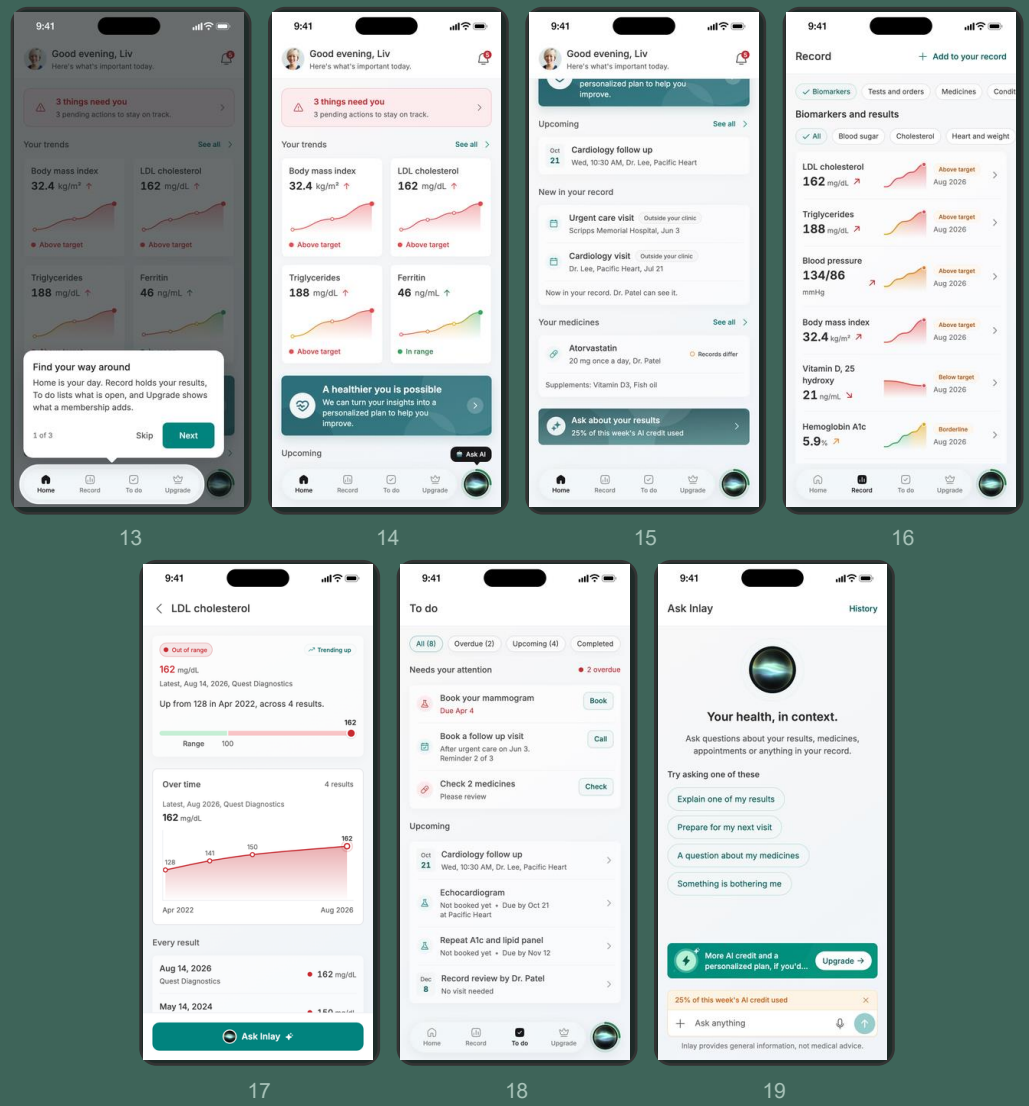

STAGE 04

Dashboard

The free record, every day: what needs attention, how results are moving, what is coming up, and an assistant that knows the record.

Screens 13–19

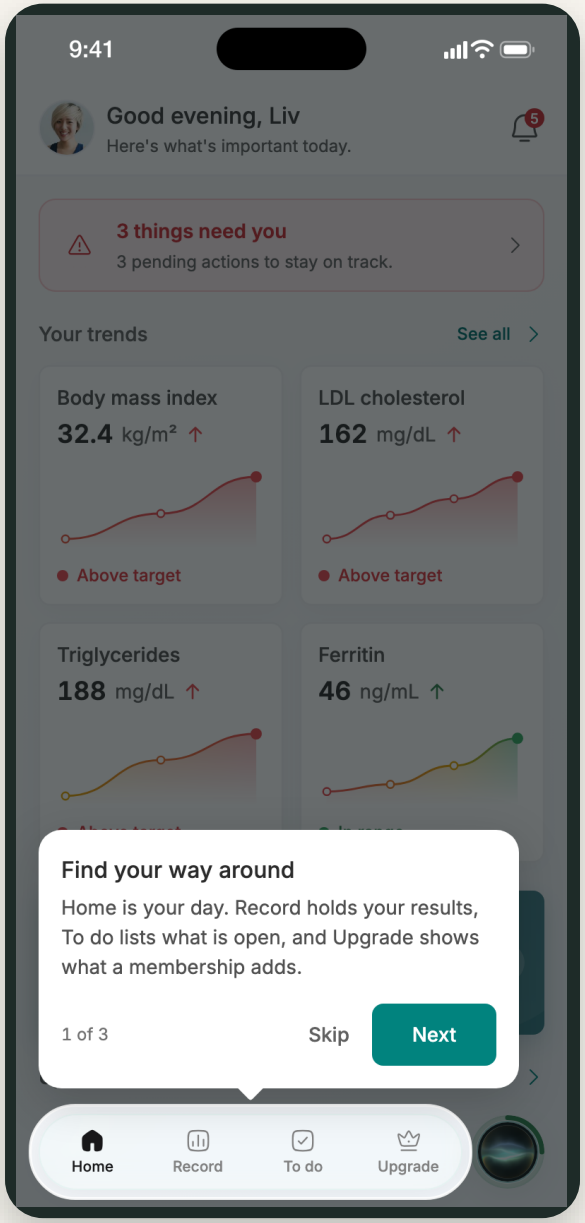

STAGE 04 · DASHBOARD

First Look: App Tour

Four tabs, explained once

The first time Home opens, a three step tour names the tabs. It runs once, over the live dashboard, and can be skipped.

- Home is your day, Record holds results, To do lists what is open, Upgrade shows what a membership adds
- The tour points at the floating tab bar and the assistant circle beside it
- Skip ends it at once; Next walks through the remaining two steps

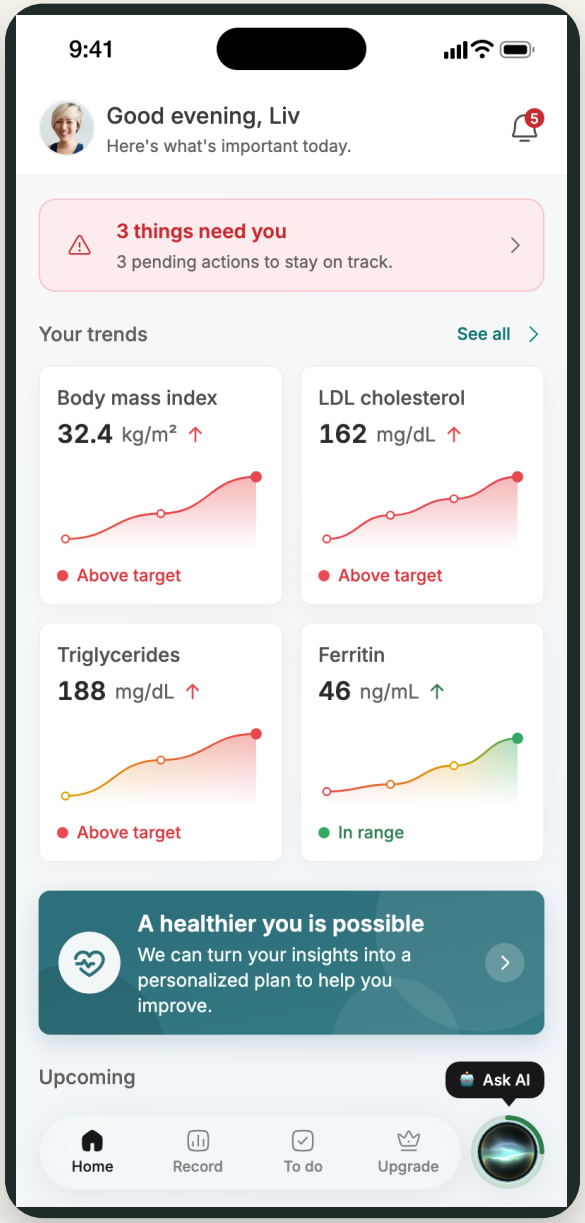

STAGE 04 · DASHBOARD

Home

What needs them, first

The free home leads with what the patient has to act on, then how their results are moving. Every trend is drawn from their own record.

- 3 things need you: a muted red card for pending actions, one tap from the To do list
- Four trend tiles: BMI 32.4, LDL 162 and triglycerides 188 above target, ferritin 46 in range
- “A healthier you is possible” comes after the trends, the one place Home points to a plan

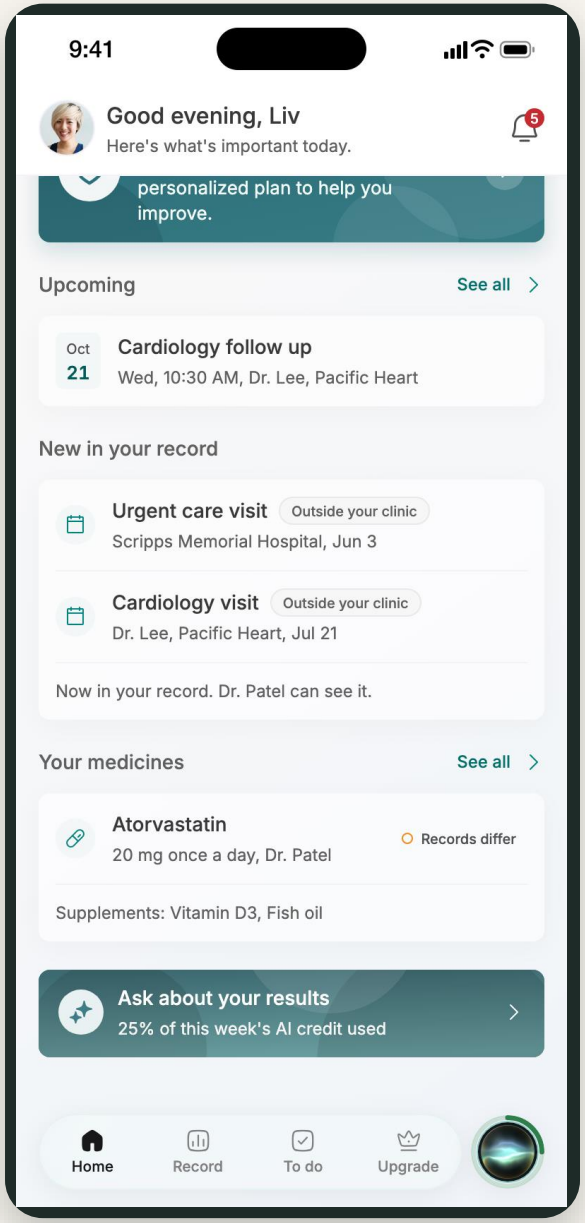

Home: Further Down

Upcoming, new, and medicines

Below the trends, Home shows what is booked, what has just arrived in the record, and the medicines on file.

- Cardiology follow up on Oct 21 with Dr. Lee at Pacific Heart
- New in your record: urgent care and cardiology visits outside the clinic, now visible to Dr. Patel
- Records differ is flagged on atorvastatin; Ask about your results shows 25% of the week's AI credit used

inlay HEALTH

16

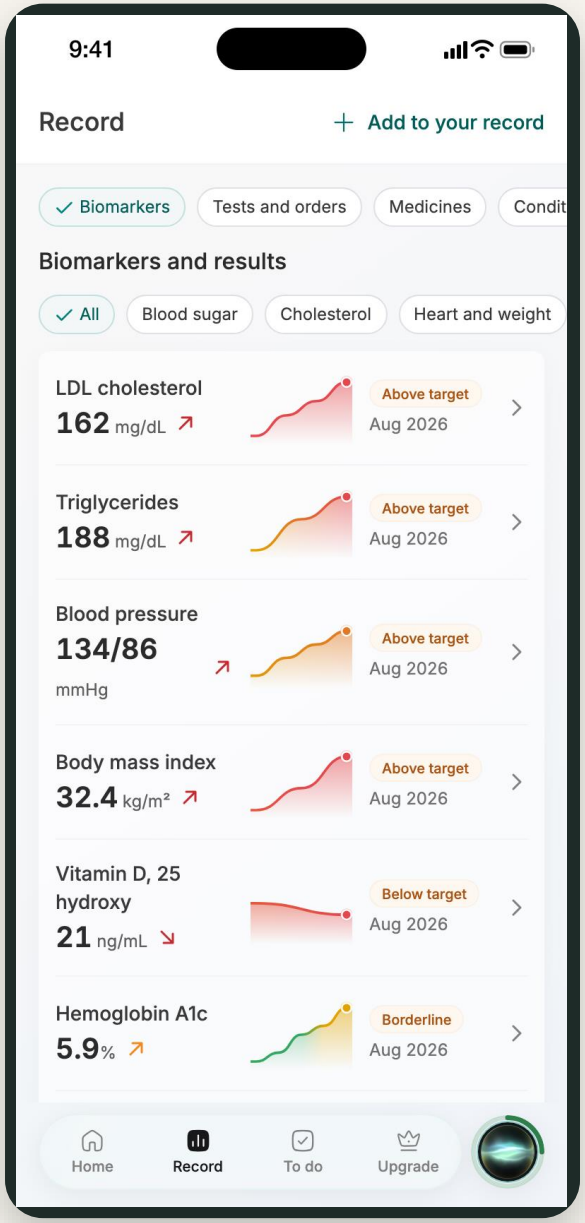

STAGE 04 · DASHBOARD

Record

Every result, with its trend

The Record tab holds the whole record: biomarkers, tests and orders, medicines, conditions, visits and more, with results grouped by body system.

- Category pills on top, body system chips under them: blood sugar, cholesterol, heart and weight
- Each row has the value, its status, a small trend and the date; out of range results come first
- Add to your record takes a result from outside the network

inlay HEALTH

17

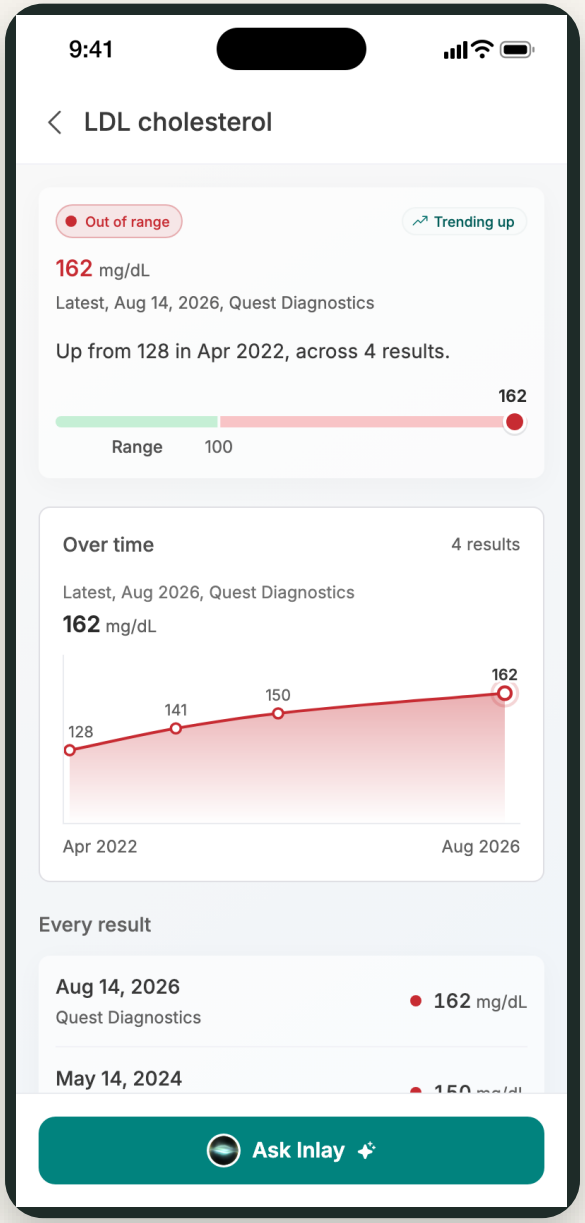

STAGE 04 · DASHBOARD

Result Detail

LDL 162, and how it got there

Opening a result shows the latest value against its range, every past reading on one chart, and where each one came from.

- Out of range and trending up: 162 mg/dL against a target under 100, up from 128 in April 2022
- Four results on the chart, each listed with its date and source, Quest Diagnostics
- What a plan adds is listed further down, and the page says plainly that it stays free

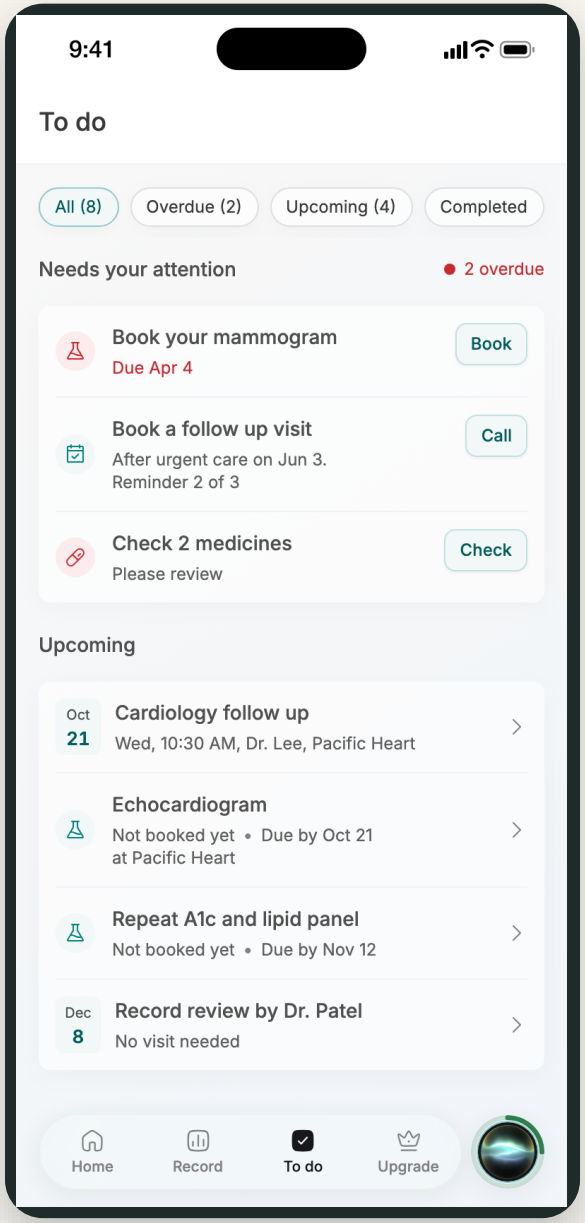

To Do

What is open, in order

Care gaps, bookings and checks in one list, split into overdue, upcoming and completed.

- 2 overdue: book a mammogram, due Apr 4, and a follow up visit after urgent care on Jun 3
- Check 2 medicines; an echocardiogram and a repeat A1c and lipid panel wait to be booked
- Dr. Patel’s record review on Dec 8 is listed with No visit needed

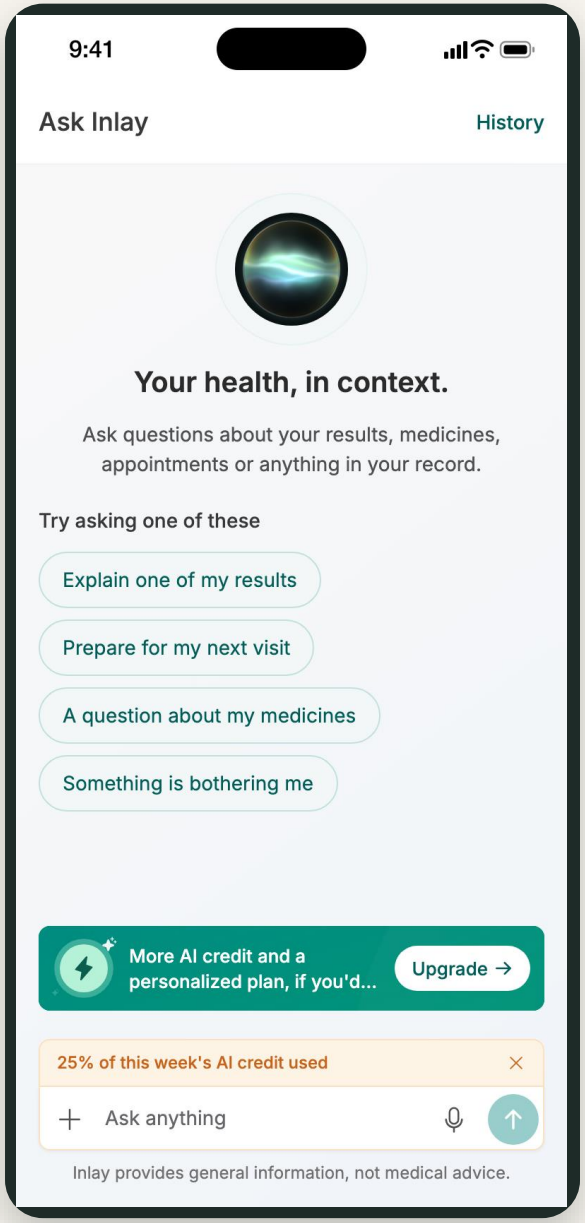

Ask Inlay

An assistant that knows the record

The assistant opens on four plain starting points. Credit is shown as a share of the week used, never as a count of questions.

- Explain one of my results, prepare for my next visit, a question about my medicines, something is bothering me
- 25% of this week’s AI credit used, on a strip above the composer
- General information, not medical advice, stated under every conversation

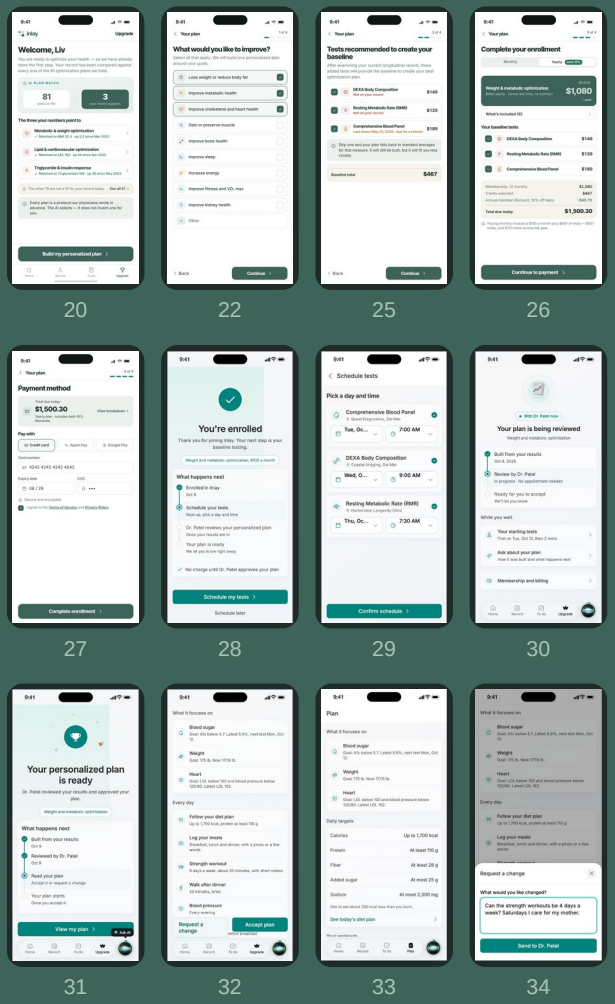

STAGE 05

Free Plan & Upgrade

From the Upgrade tab to a physician approved plan: the AI plan match, then four steps — goals, baseline tests, enrollment and payment — then review, accept or ask for a change.

Screens 20, 22, 25–34

inlay HEALTH

STAGE 05 · FREE PLAN & UPGRADE

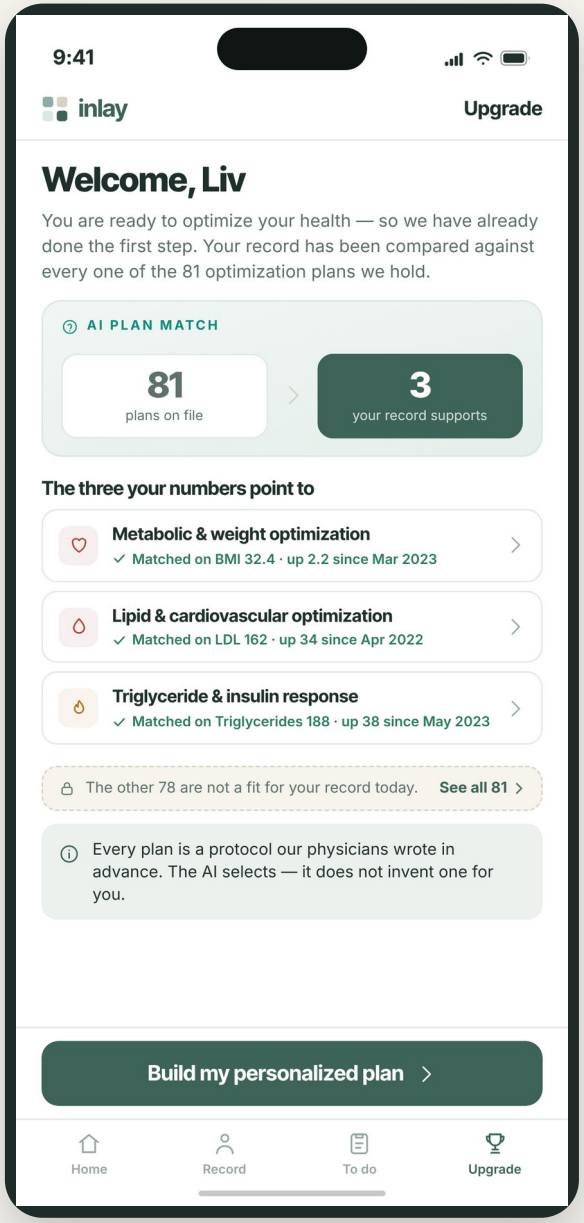

20

Upgrade

Welcome first, then the match

The tab opens by recognising why the patient is here, by their preferred name, and says what has already been done with their record before asking for anything.

- “Welcome, Liv” — the preferred name from the clinic record, so the greeting is evidence the record is live
- AI compares all 81 predetermined optimization plans against that record; three are surfaced, driven by BMI 32.4, LDL 162 and triglycerides 188
- The other 78 are named and reachable from the same screen, so the number is checkable rather than a claim

inlay HEALTH

STAGE 05 · FREE PLAN & UPGRADE

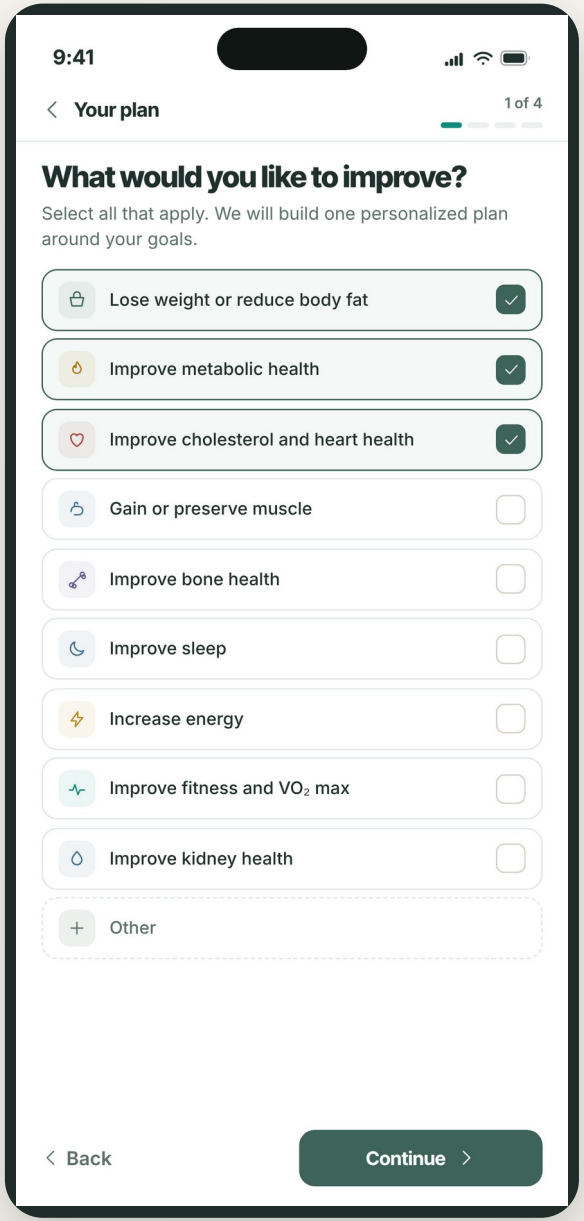

22

Select Your Goals

Goals first, not a questionnaire

Ten goals, multi-select. One plan serves several goals rather than forcing the patient into a single named program.

- Three chosen here: lose weight, improve metabolic health, improve cholesterol and heart health
- Other opens a sheet for the patient's own words
- Step 1 of 4 — the flow lost two steps when screens 23 and 24 came out

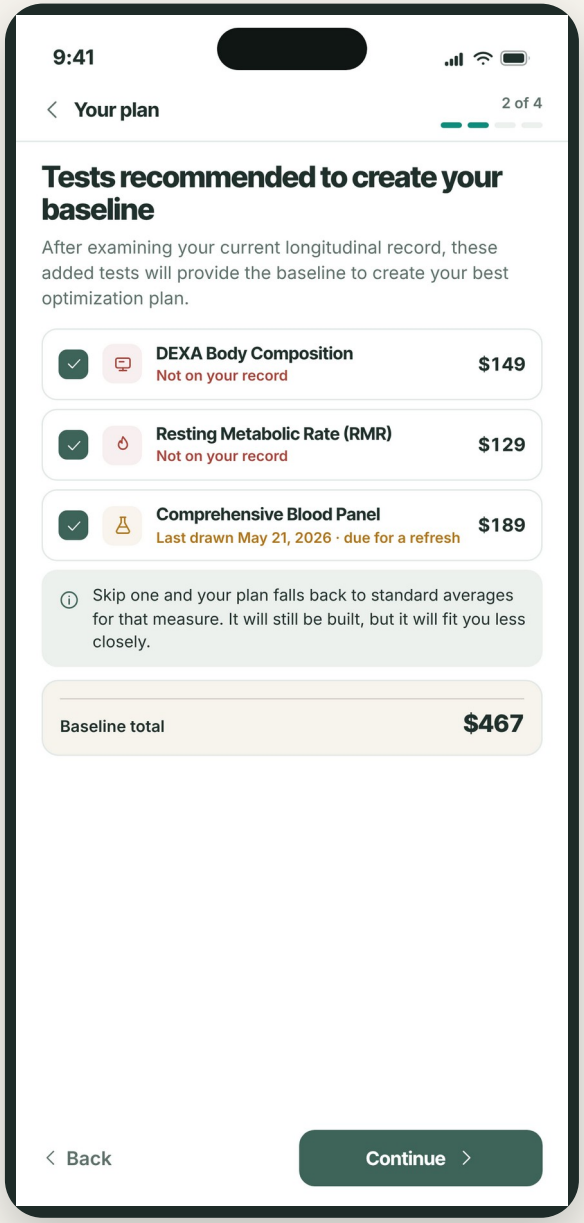

Establish Your Baseline

What the record is missing

After examining the current longitudinal record, these added tests provide the baseline needed to create the best optimization plan.

- DEXA and RMR are not on the record at all; the blood panel was last drawn May 21, 2026 and is due for a refresh
- $149 DEXA, $129 RMR and $189 blood panel, for a baseline total of $467
- A skipped test falls back to standard averages for that measure, and the screen says so

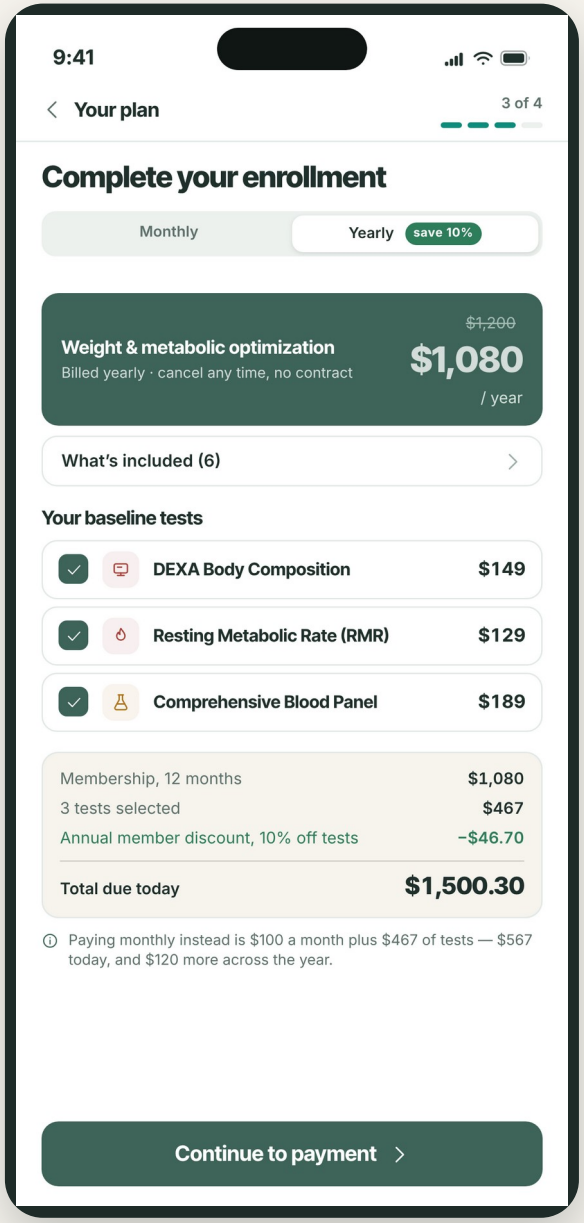

Complete Your Enrollment

The year, at ten percent off

Membership and tests each carry a 10% discount when the year is paid up front. The monthly price stays on the screen beside it.

- $1,200 a year becomes $1,080, a saving of $120 against paying by the month
- The three tests at $467 carry the same 10% as an annual member: −$46.70
- Total due today $1,500.30, against $567 today and $120 more across the year on the monthly path

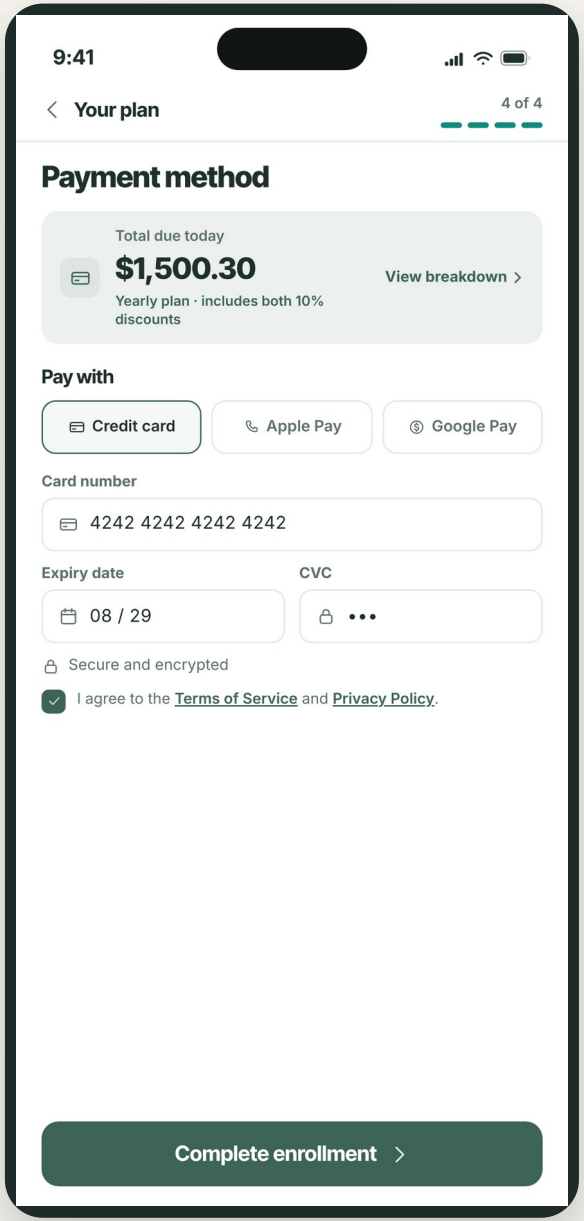

Payment Method

Pay and agree on one screen

The total carries through from the plan chosen on the step before, its breakdown a tap away, then how to pay and the agreement.

- $1,500.30 on the yearly plan, matching screen 26 rather than quoting the monthly figure
- Credit card, Apple Pay or Google Pay; the wallets confirm in their own sheet
- Complete enrollment stays off until there is a way to pay and the terms are ticked

inlay HEALTH

28

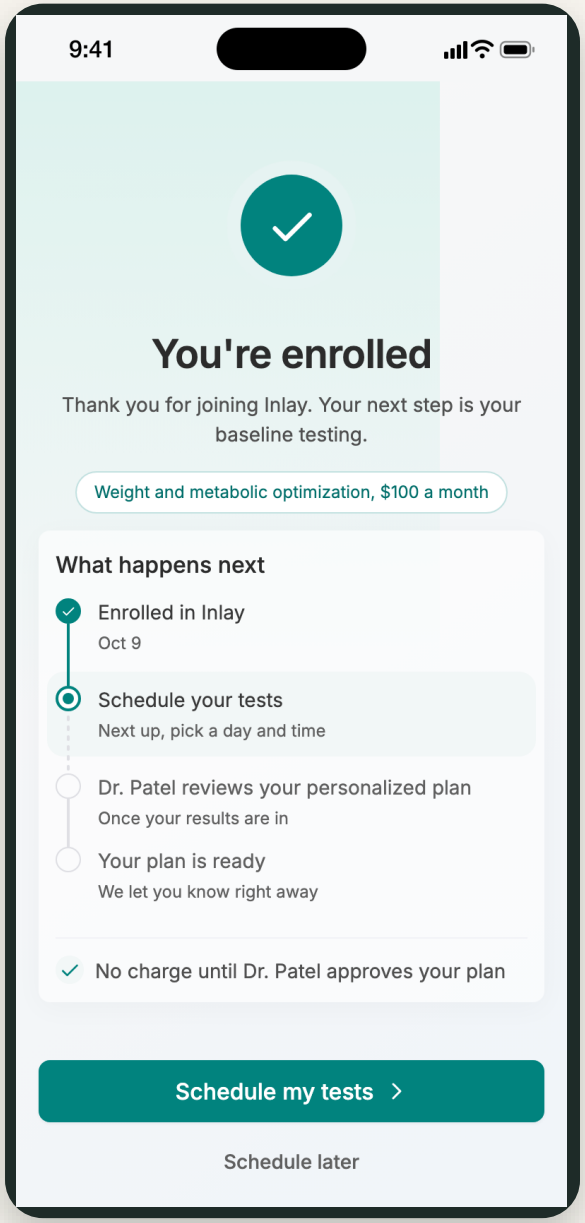

STAGE 05 · FREE PLAN & UPGRADE

You’re Enrolled

What happens next, in order

The membership has started. The patient leaves the purchase knowing each step and who does it, with the physician named before the review happens.

- Enrolled Oct 9; schedule your tests next; Dr. Patel reviews the plan once results are in
- No charge until Dr. Patel approves your plan
- Schedule my tests, or Schedule later, which keeps the tests in To do

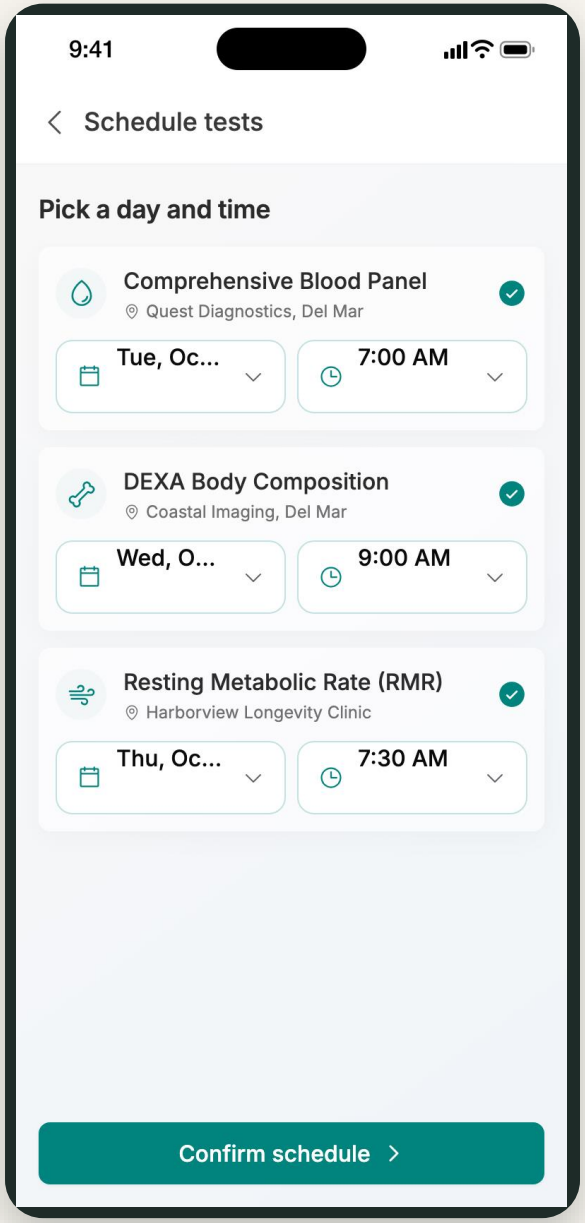

Schedule Tests

A day and a time for each test

Each paid test with its place, a date and a time. Confirm schedule books all three at once.

- Blood panel at Quest Diagnostics, DEXA at Coastal Imaging, RMR at Harborview Longevity Clinic
- Date opens a calendar of open weekdays, then the times for that day
- Tue Oct 13, Wed Oct 14 and Thu Oct 15 booked here, all first thing in the morning

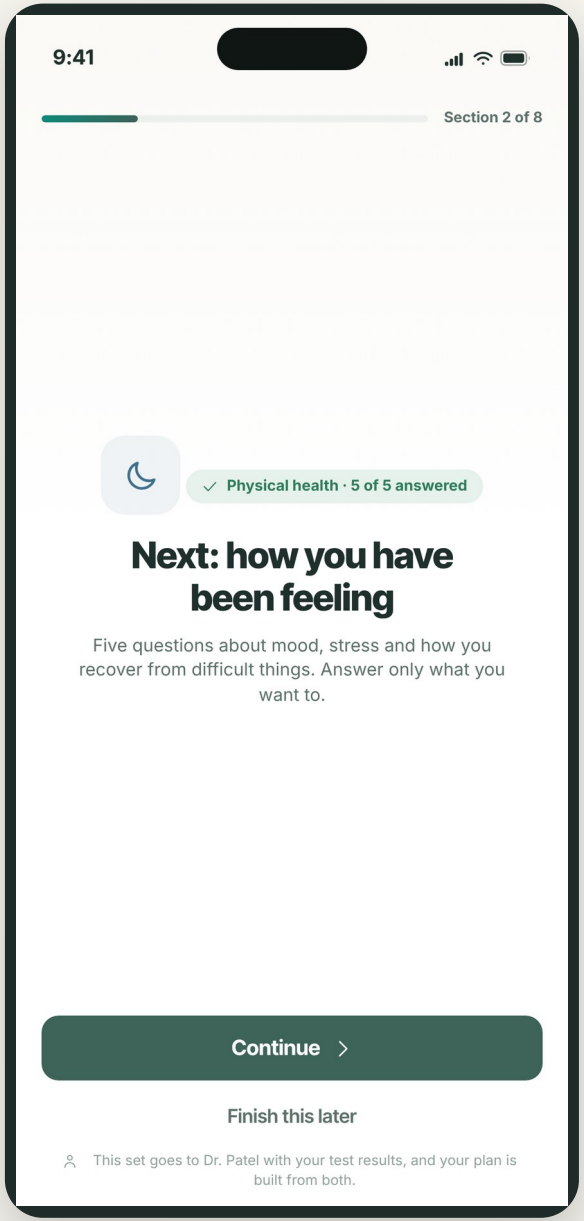

Section Transition

Eight short sections, not a form

The rest of the instrument runs as eight sections of four or five questions, each one introduced and each one safe to leave.

- A finished section is named and ticked, so progress is felt rather than read off a bar
- Finish this later keeps the set in To do and resumes at the section, not at the beginning
- The patient is told plainly that this set reaches Dr. Patel alongside the test results

inlay HEALTH

29b

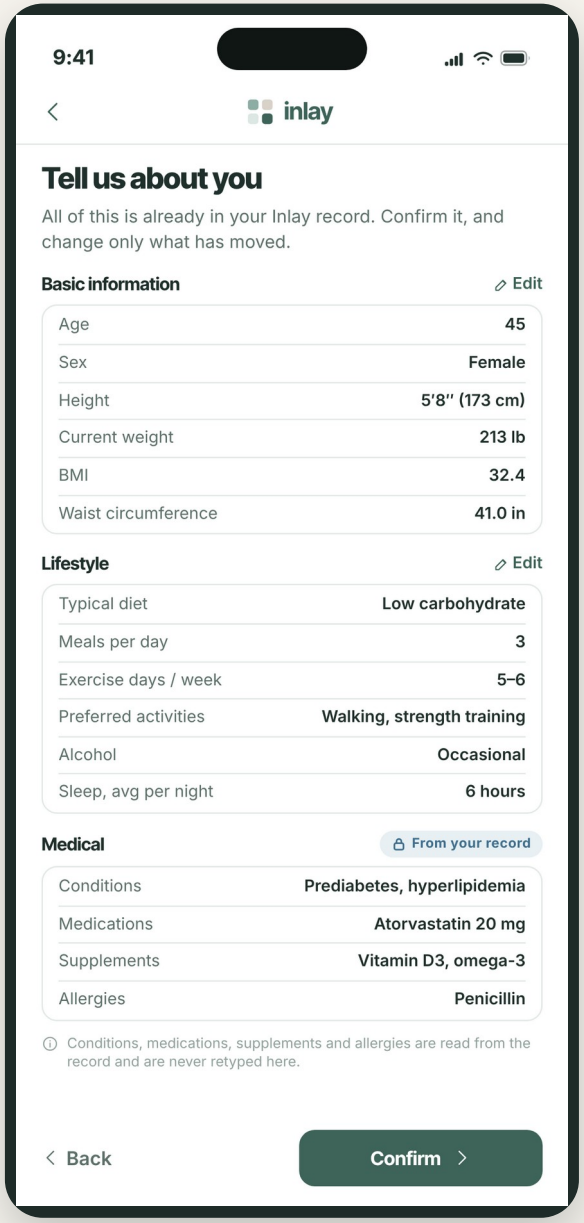

STAGE 05 · FREE PLAN & UPGRADE

Tell Us About You

Pre-filled, then confirmed

Sixteen fields in three blocks, every one of them already in the record. The patient confirms them and edits only what has changed.

- Basic information and lifestyle open an edit sheet; medical carries no Edit, because it is the record
- Age, sex, height, weight, BMI and waist, then diet, meals, exercise days, activities, alcohol and sleep
- Reconciled to the rest of the deck: screen 5 has Olivia at 45 and female, and BMI 32.4 puts 5′8″ at 213 lb, not 166

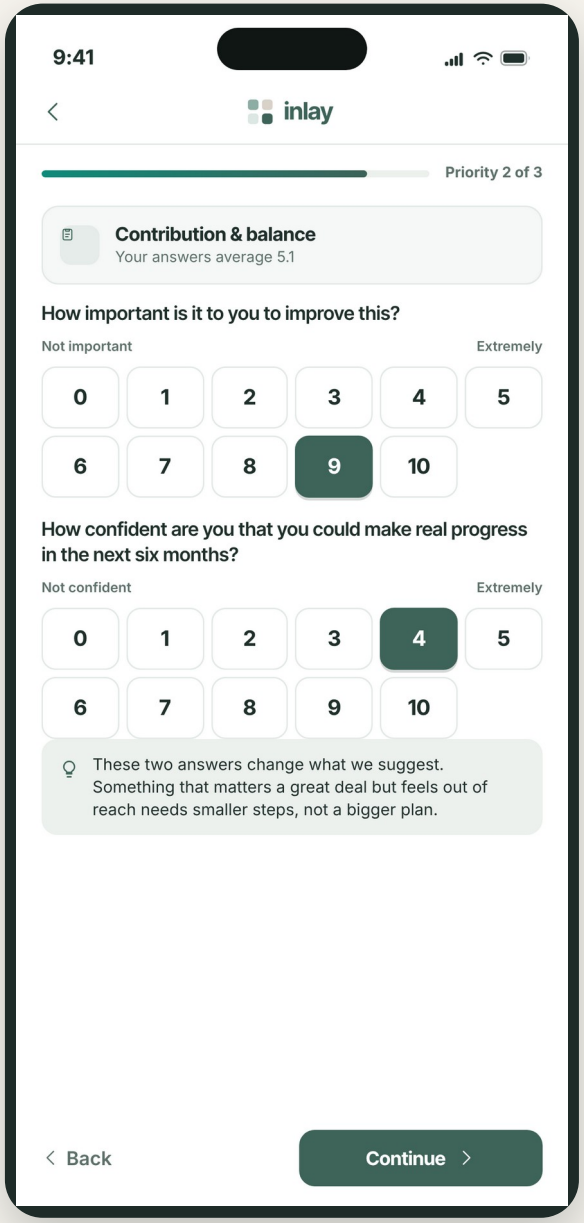

Importance & Confidence

The gap that sets the pace

Two more questions on each of the three priorities. The gap between the answers is the most useful number the assessment produces.

- Contribution and balance here: importance 9, confidence 4 — high stakes, low belief
- A wide gap routes to smaller steps and more frequent contact, not to a larger plan
- Same scale and same geometry as every other question, so nothing has to be relearned

inlay HEALTH

29d

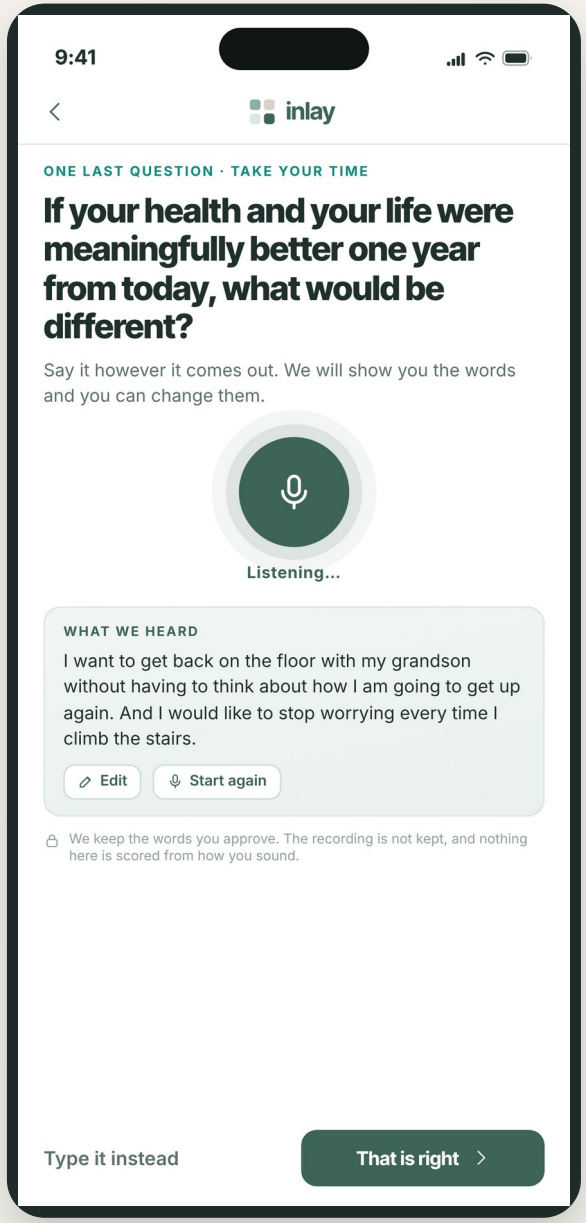

STAGE 05 · FREE PLAN & UPGRADE

In Their Own Words

The answer that is not a number

Voice is offered here and nowhere else. Speaking beats typing for an answer this open, and the words matter more than the speed.

- The transcript is shown and editable; only the words the patient approves are kept
- The recording is not retained, and nothing is scored from tone, pace or hesitation
- Type it instead carries equal weight, for the patient who would rather not speak

inlay HEALTH

29e

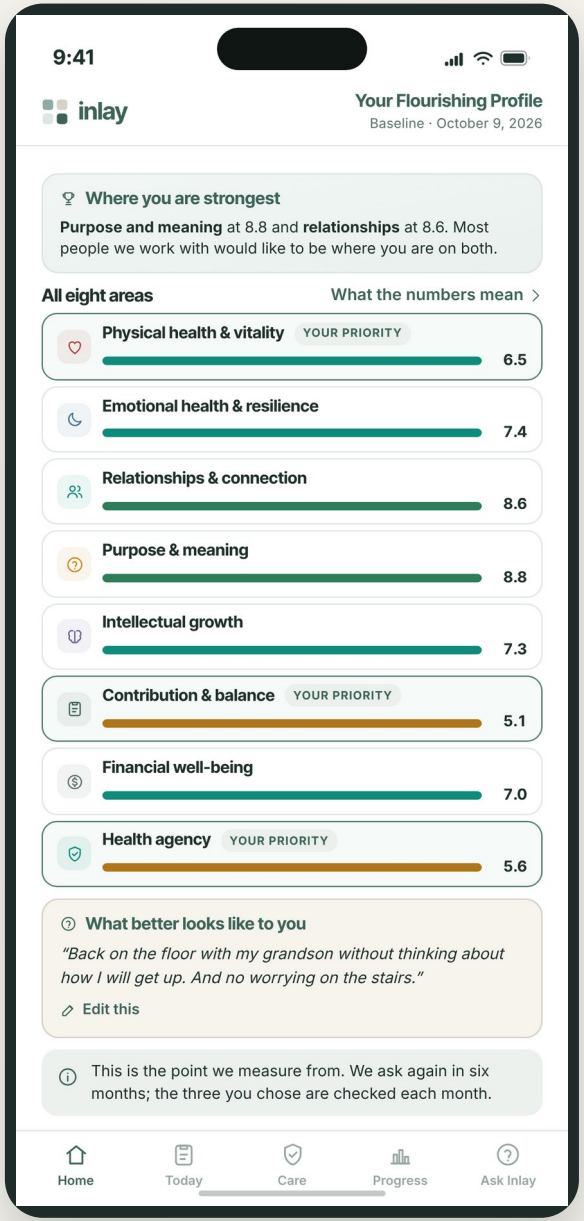

STAGE 05 · FREE PLAN & UPGRADE

Flourishing Profile

The point we measure from

Five items per domain, averaged. This is the number every later reassessment is compared against, and it reaches Dr. Patel with the labs.

- Single-item readings move once the set is complete: physical health 6.2 to 6.5, contribution 5.4 to 5.1
- The three priorities are flagged and checked monthly; the other five are not asked again until six months
- The patient's own sentence sits under the bars, so the plan stays answerable to it

inlay HEALTH

30

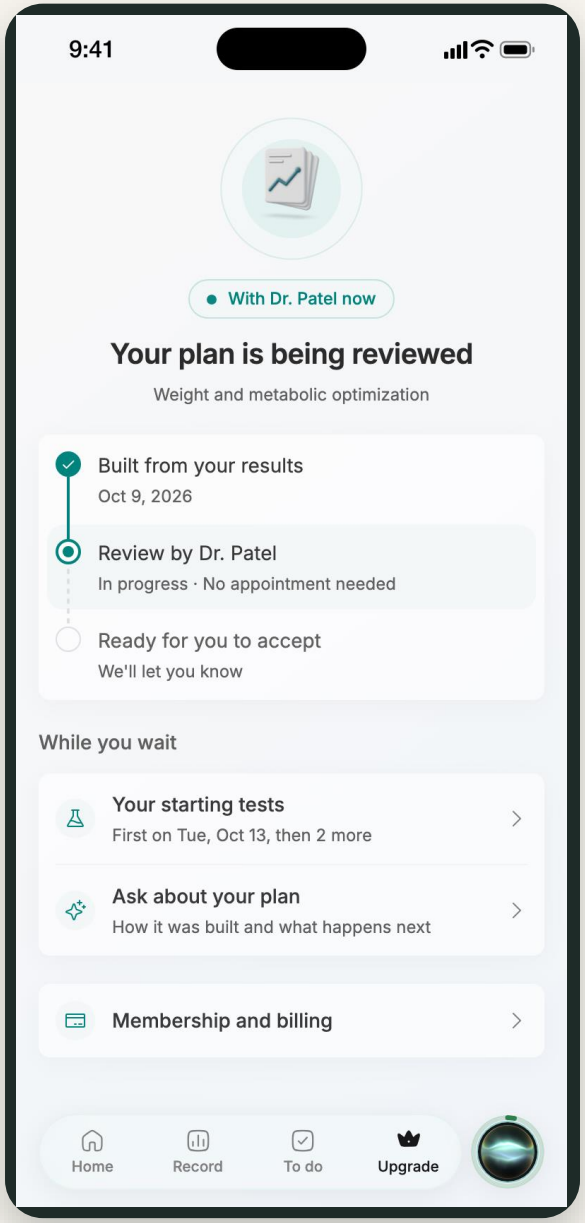

STAGE 05 · FREE PLAN & UPGRADE

Your Plan Is Being Reviewed

With Dr. Patel now

The plan is built from the results and sent to the patient's own physician. The review needs no appointment, and the screen says so.

- Built from your results Oct 9, review by Dr. Patel in progress, then ready for you to accept
- While you wait: your starting tests, Ask about your plan, membership and billing
- The patient is told the moment the plan is approved

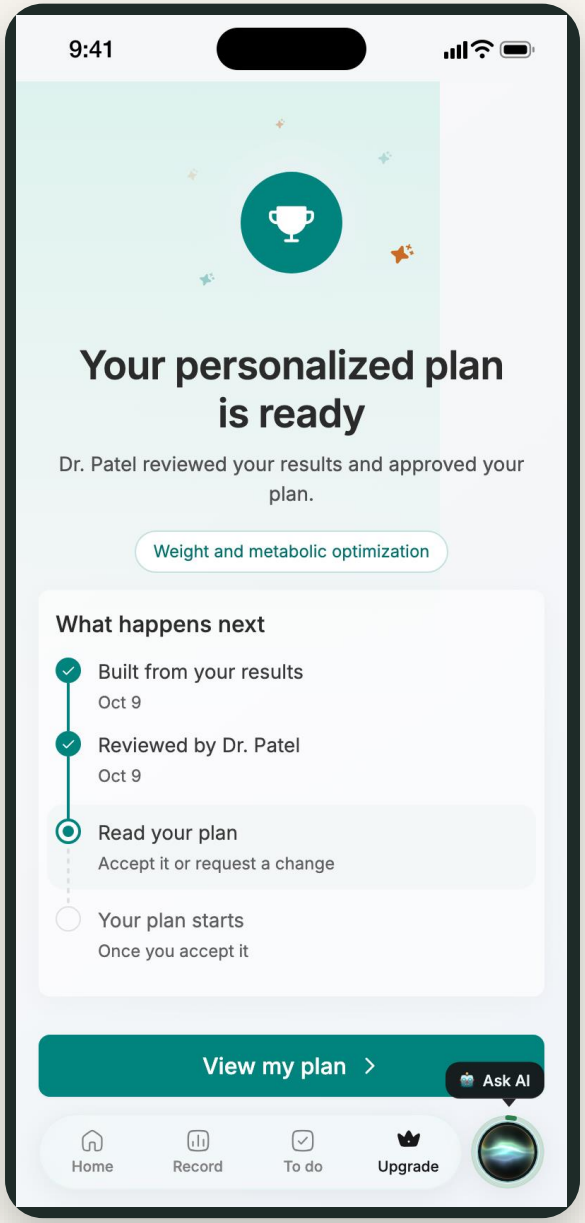

STAGE 05 · FREE PLAN & UPGRADE

Your Plan Is Ready

Approved, and attributed

Shown once, the first time the Plan tab opens after Dr. Patel sends version 1.

- Dr. Patel reviewed your results and approved your plan
- The next step is the patient's: read the plan, then accept it or request a change
- View my plan opens the plan itself

inlay HEALTH

32

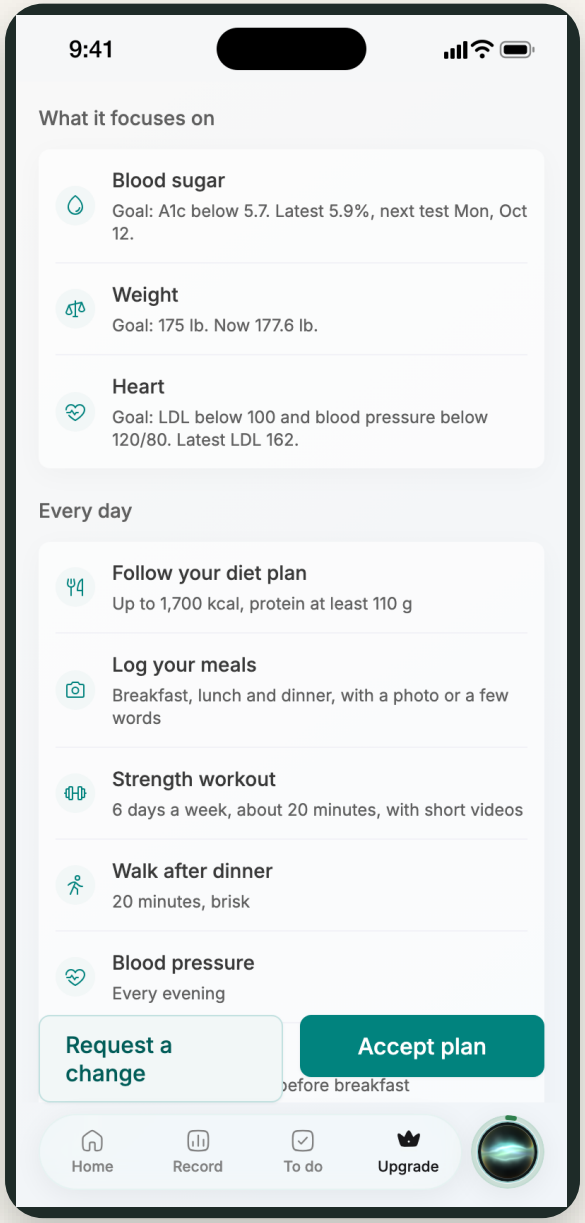

STAGE 05 · FREE PLAN & UPGRADE

Read Your Plan

Nothing starts until they accept

The full plan, with two actions side by side over the tab bar: Request a change and Accept plan.

- Goals: A1c below 5.7, weight 175 lb, LDL below 100 and blood pressure below 120/80
- Every day: a diet plan up to 1,700 kcal, logged meals, strength workouts and a walk after dinner
- Request a change sits beside Accept plan, never behind a menu

STAGE 05 · FREE PLAN & UPGRADE

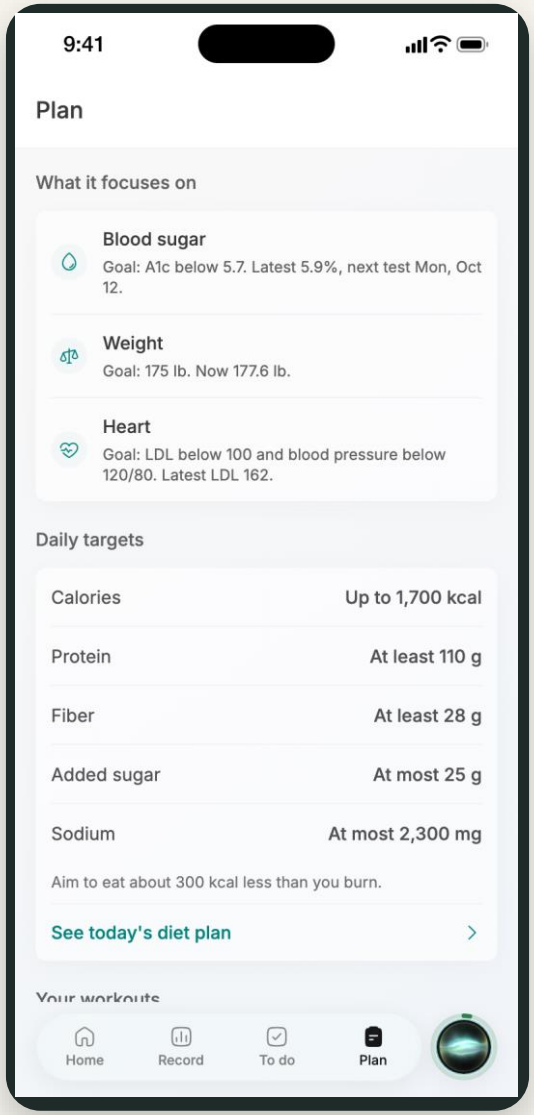

Accept or Request a Change

Two ways forward

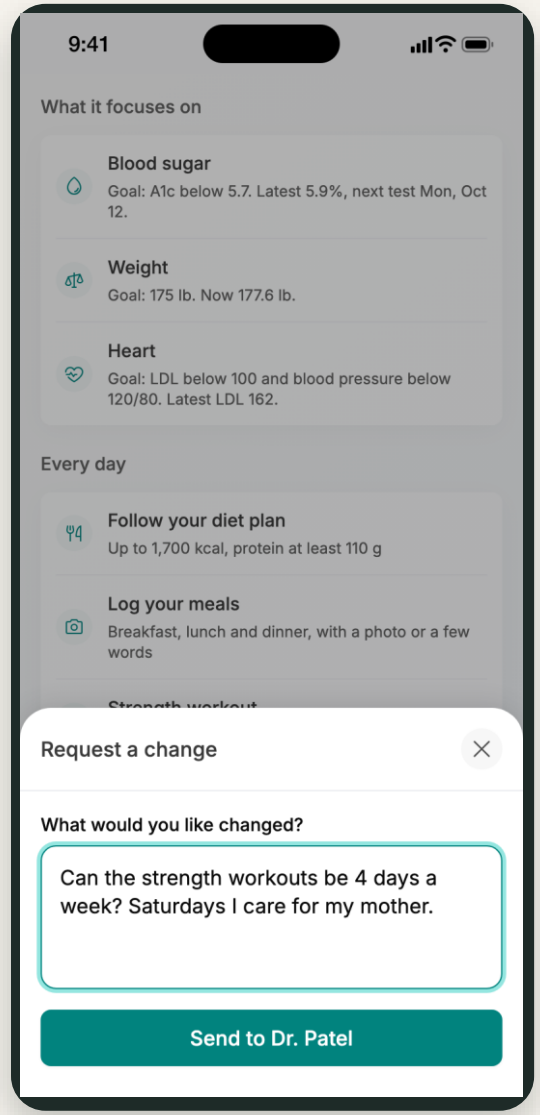

Accepting starts the plan at once. A change request sends the patient's own words to Dr. Patel.

- Accept: the Plan tab becomes the live plan, with daily targets and today's diet plan
- Request a change: one question, What would you like changed?, sent to Dr. Patel
- Once accepted, the day starts with Yesterday, the next screen in this journey

If they accept

If they ask for a change

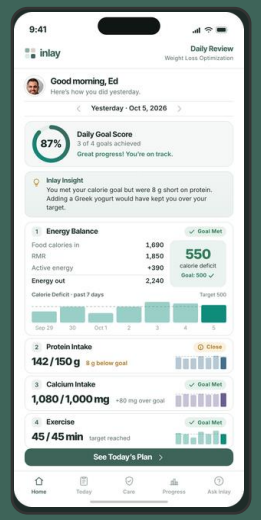

STAGE 06

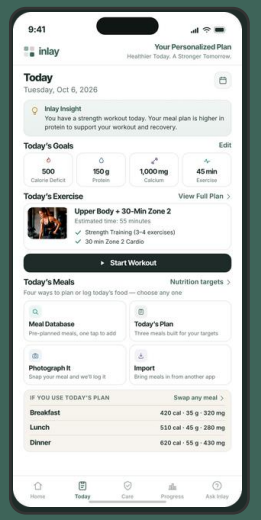

Daily Use

Five screens that run every day: yesterday's score, today's plan, measured progress, photographic evidence and the projection that renews the subscription.

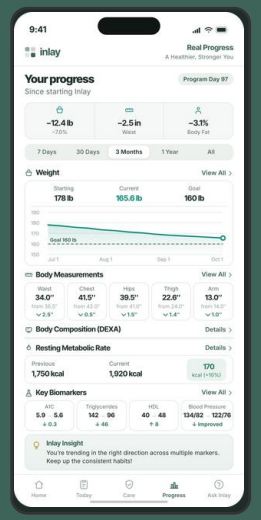

Screens 35–39

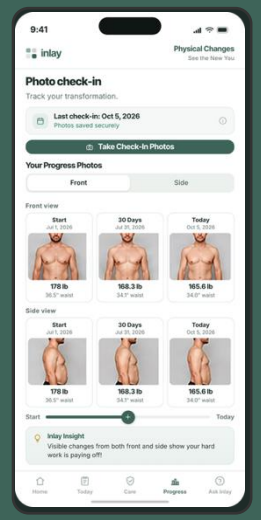

35

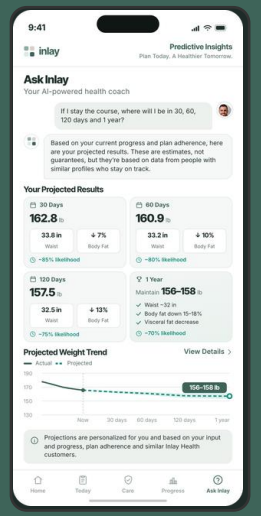

36

37

38

39

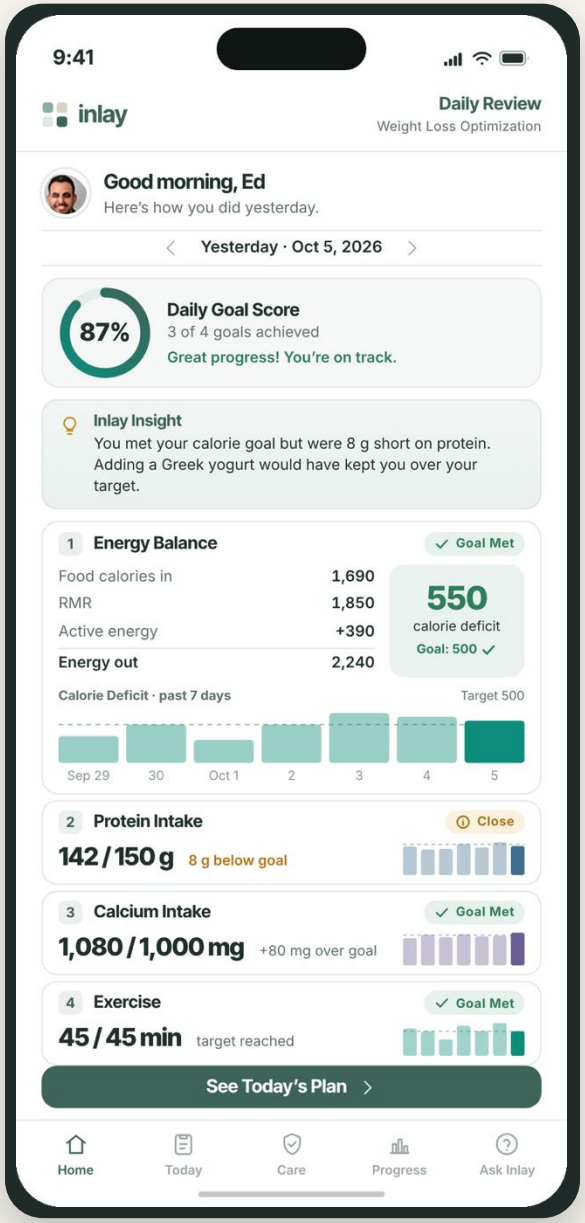

STAGE 06 · DAILY USE

Yesterday: How Did I Do?

The first screen every morning

One score, one insight and four goals — the whole of yesterday in a single screen, with no scrolling required.

- 87% daily goal score, 3 of 4 goals achieved
- Energy balance reconciles on screen: 2,240 kcal out, 1,690 in, a 550 deficit against a 500 goal
- The insight names the one miss — 8 g of protein — and what would have closed it

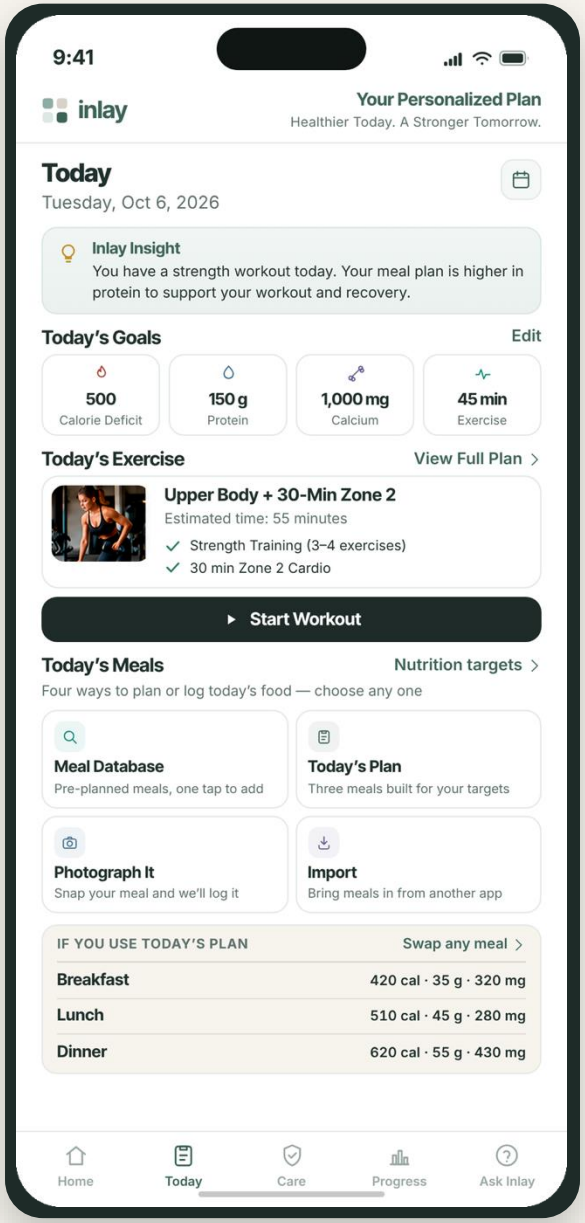

STAGE 06 · DAILY USE

Today: Personalized Plan

Four ways to eat the plan

A fixed menu is the fastest way to lose a patient. The day's targets stay fixed — 500 cal deficit, 150 g protein, 1,000 mg calcium, 45 min exercise — but the food itself can come from four different places.

- Meal database and today's plan both add in one tap, already costed in calories, protein and calcium
- Photograph It covers the meal that was never in anyone's plan; Import takes the patient who already tracks elsewhere
- The built plan stays visible but optional: breakfast 420 cal, lunch 510, dinner 620, with any meal swappable

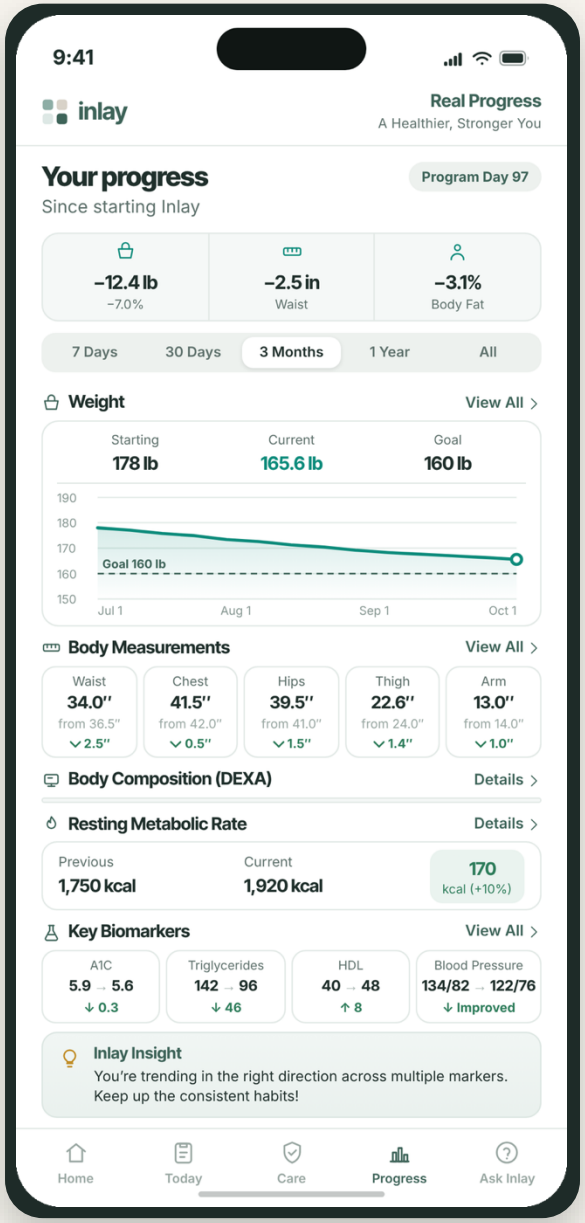

Progress

Day 97

The screen the patient shows other people — and the one that renews the subscription.

- −12.4 lb, −2.5 in at the waist, −3.1% body fat since starting
- Biomarkers moved: A1C 5.9→5.6, triglycerides 142→96, HDL 40→48, BP 134/82→122/76
- RMR up 170 kcal (+10%) — measured proof that lean mass was preserved through the loss

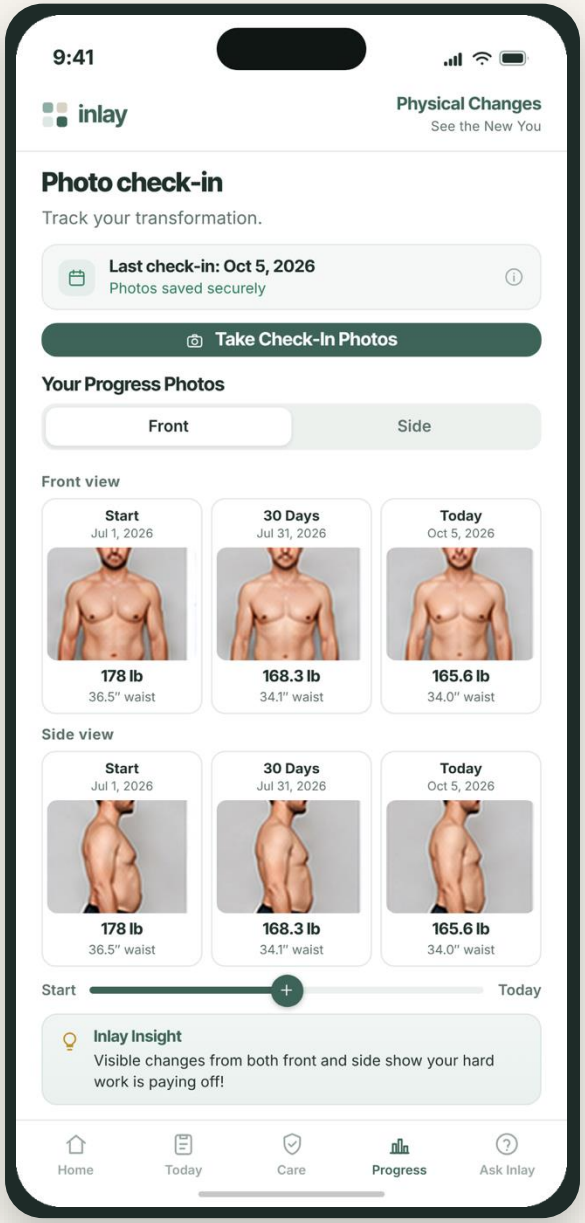

STAGE 06 · DAILY USE

Photo Check-In

Evidence they can see

Front and side, three dates, with weight and waist under each frame.

- Jul 1 — 178 lb · Jul 31 — 168.3 lb · Oct 5 — 165.6 lb
- Photographs stored securely; the comparison slider is the moment patients share
- Visible change is what holds a subscription together when the scale stalls

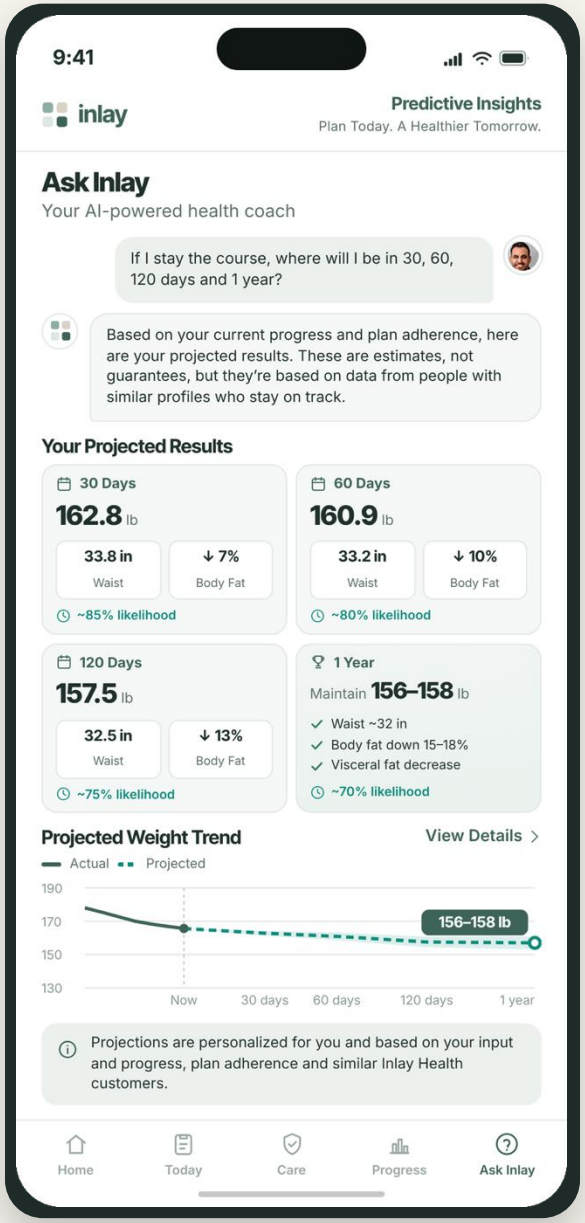

STAGE 06 · DAILY USE

Ask Inlay — Predictive Insights

Where this goes if they stay

The retention screen. It answers the question every patient asks at month three.

- 30 days 162.8 lb · 60 days 160.9 lb · 120 days 157.5 lb · 1 year maintain 156–158 lb
- Every projection carries a likelihood: 85%, 80%, 75% and 70%
- Framed as estimates drawn from similar patients, never as a promise

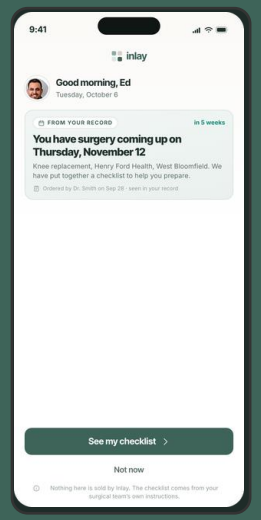

STAGE 07

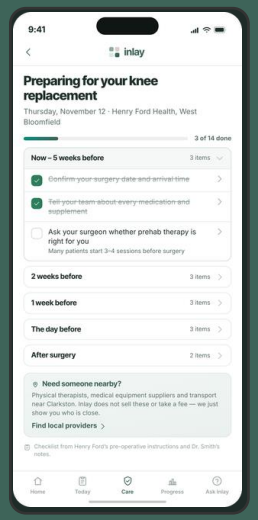

Inlay Care

The app sees the surgery in the record and hands the patient a checklist drawn from their own surgical team's instructions, with a directory of who is nearby. None of that is sold. Longevity Care, the elective screening catalogue, remains a paid Inlay product.

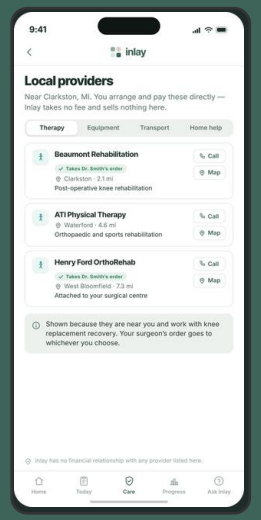

Screens 40–45

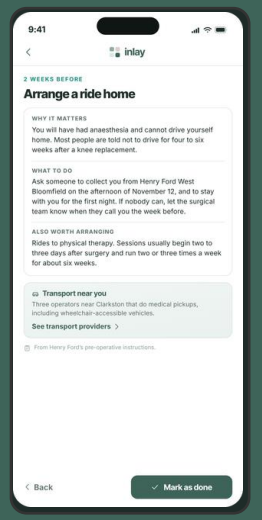

40

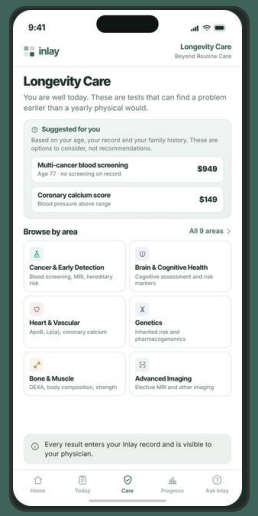

41

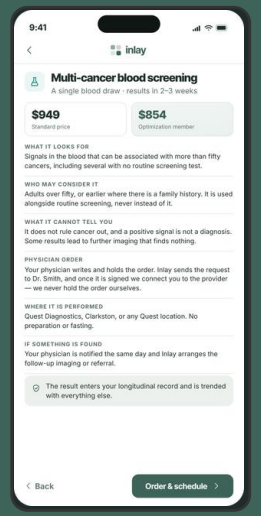

42

43

44

45

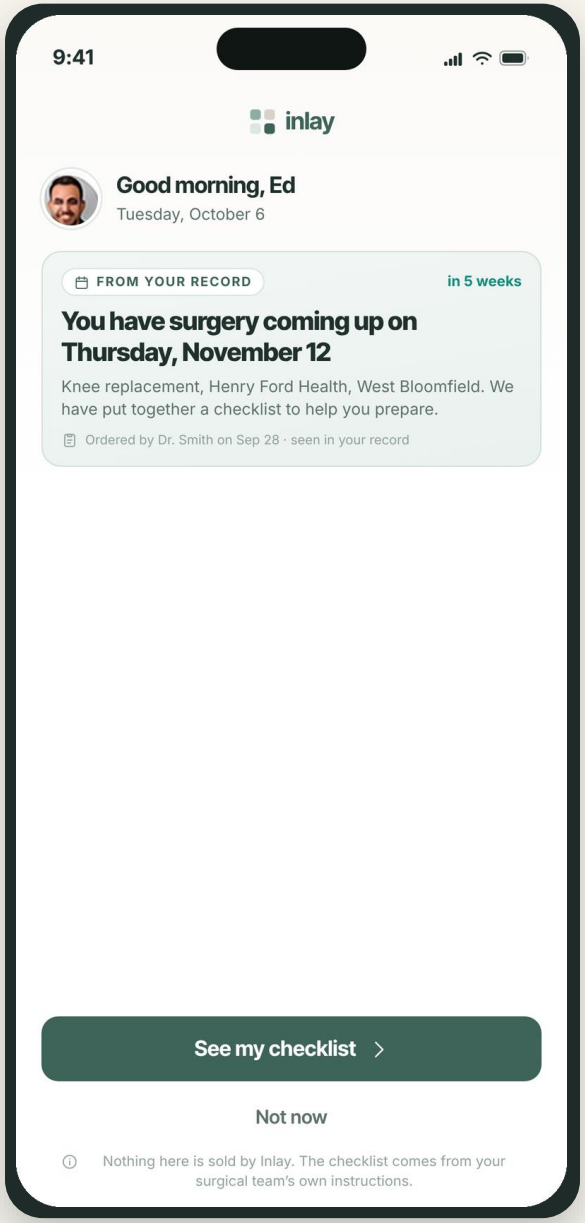

STAGE 07 · INLAY CARE

First Screen — Surgery Detected

Proof that we know them

When Inlay sees the surgery in the record, this takes the screen before Home. It says one thing, and that one thing is the whole argument for the free record.

- “You have surgery coming up on Thursday, November 12” — named, dated, five weeks ahead
- Ordered by Dr. Smith on Sep 28, and the screen says so, because the source is what makes it credible
- Nothing is sold here. The line under the button says the checklist comes from the surgical team, not from us

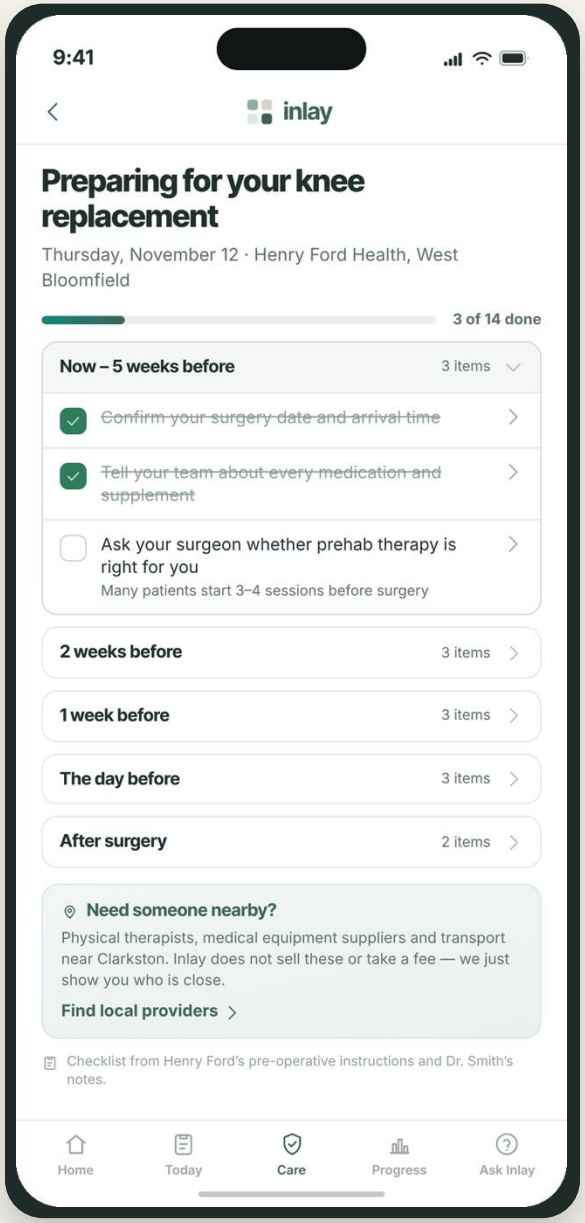

Preparation Checklist

Fourteen things, in the right order

Grouped by when each one matters rather than listed flat, so the patient sees the three things to do now instead of a wall of instructions five weeks early.

- 3 of 14 done, with the current group open and the rest collapsed until their time comes
- The content is Henry Ford's own pre-operative instructions and Dr. Smith's notes — Inlay carries it, Inlay did not write it
- One box at the foot for local providers, worded as help rather than as a storefront

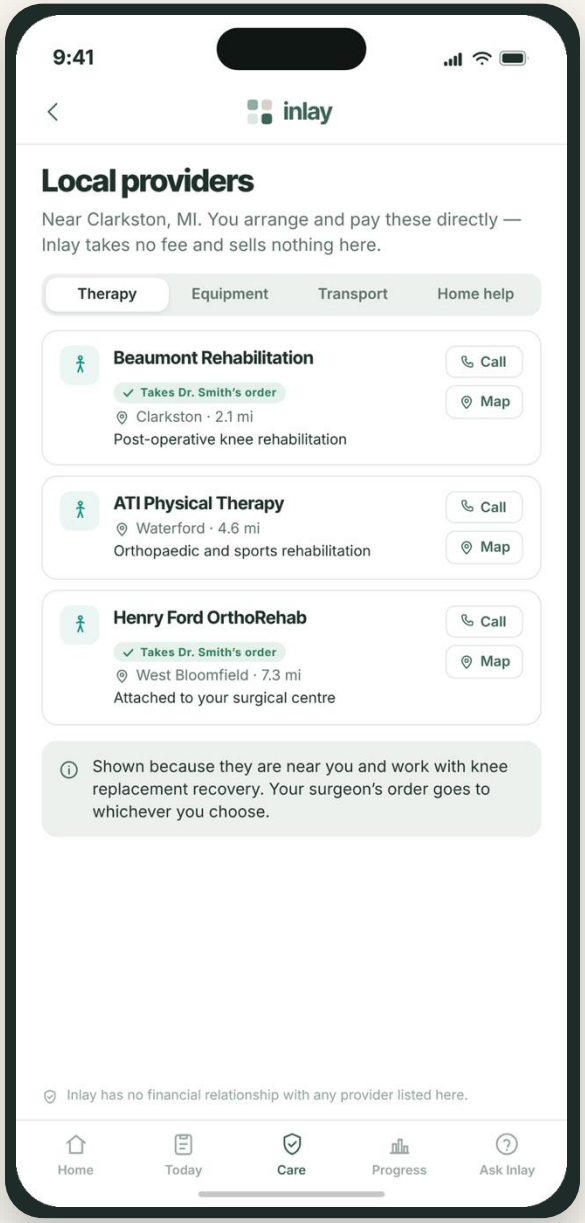

Local Providers

Who is nearby, and nothing else

Therapy, equipment, transport and home help near Clarkston. The patient arranges and pays directly; Inlay takes no fee and never touches the transaction.

- Two of the three clinics already accept Dr. Smith's order — the one thing only we would know
- Call and Map. No price, no booking, no checkout
- "Inlay has no financial relationship with any provider listed here" sits at the foot of the screen

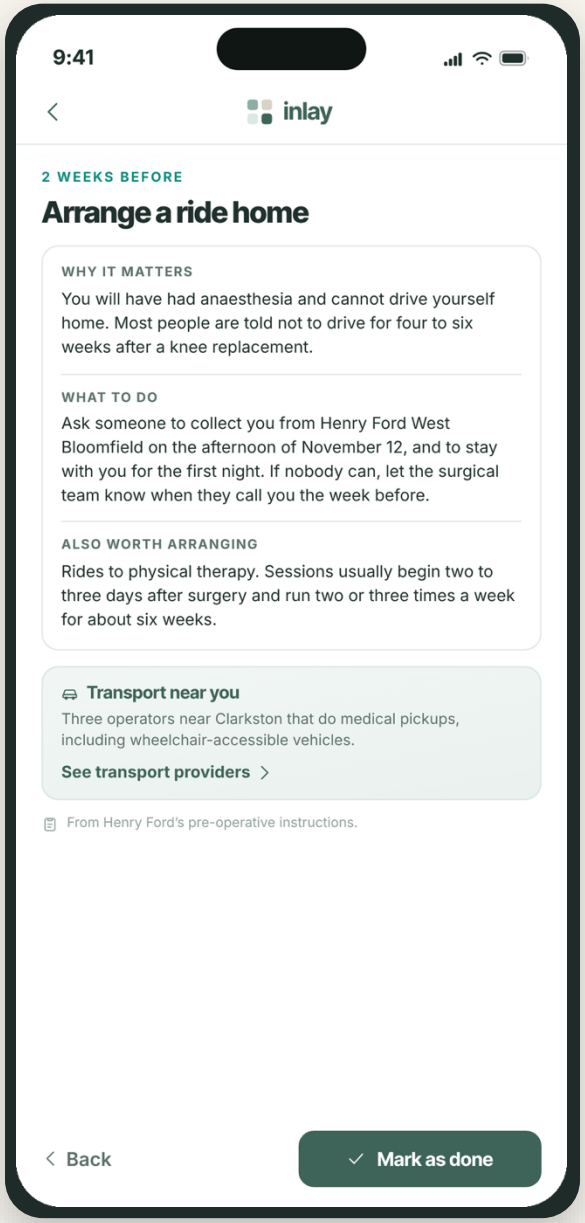

STAGE 07 · INLAY CARE

Checklist Item

Why, not just what

Opening an item gives the reason behind it, which is what turns a list of instructions into something a patient actually follows.

- Why it matters, what to do, and what else is worth arranging while they are at it
- Dated and specific: collected from Henry Ford West Bloomfield on the afternoon of November 12
- The transport box appears here too, because this is the moment the patient needs it

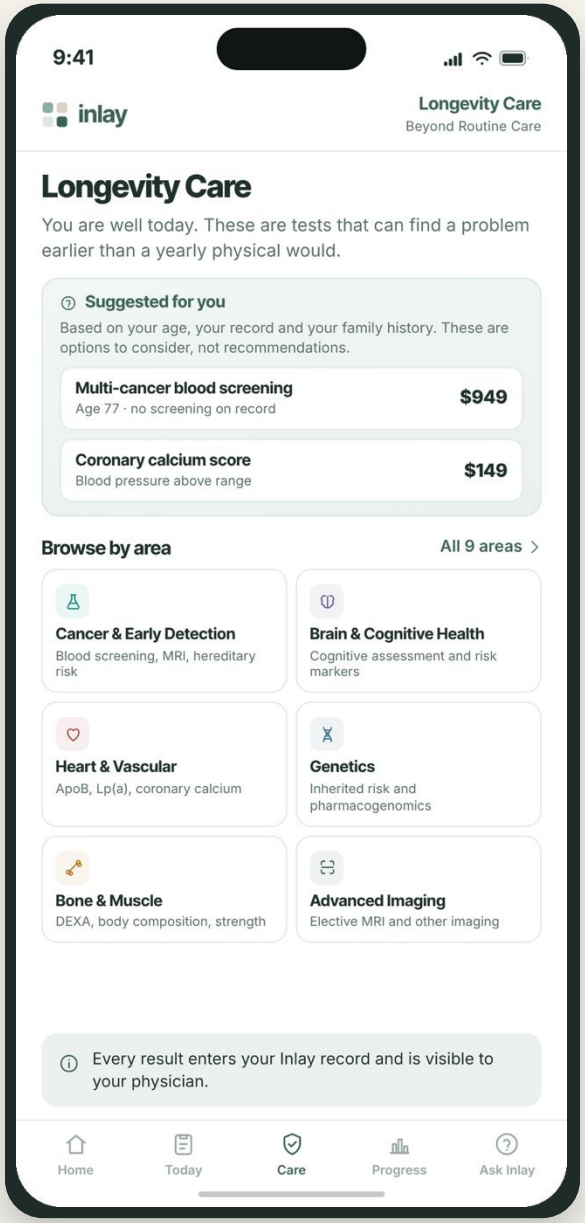

Longevity Care

For the patient who comes looking

The elective side, and the one part of Inlay Care that is still sold. Nothing here is triggered by an event — it is for the well patient who wants to find something early.

- “You are well today” is the opening line, which is what makes the rest of the page credible
- Suggested for you sits above the catalogue, drawn from age, record and family history
- Suggested is worded as options to consider, never as recommendations

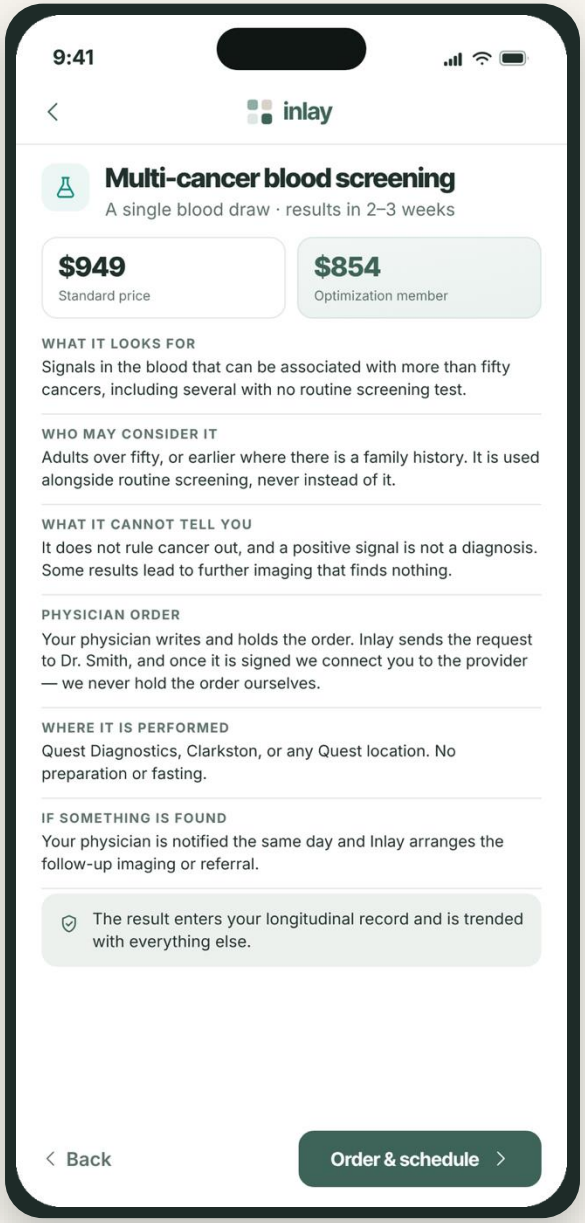

STAGE 07 · INLAY CARE

Longevity Care — Test Detail

What it cannot tell you

Every elective test carries the same six disclosures, the limits included. This is the page that protects the brand when a screening result turns out to be nothing.

- $949 standard, $854 for members, with the request routed to the physician rather than left to the patient
- The physician writes and holds the order; Inlay only connects the patient to the provider
- “It does not rule cancer out, and a positive signal is not a diagnosis” sits on the page, not in the terms

inlay HEALTH

Where the questions go

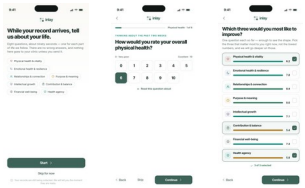

Both sets sit in time the patient is already waiting. Neither stands between them and something they want to see.

INSERT A · AFTER SCREEN 10

Eight anchor questions

Between the Why Card and Building Your Record, while the pull from the networks is still running.

Screen 10 already promises it: “the card goes into the care plan, and the Human Flourishing Index follows it.” Screen 11 says the pull can take minutes. The questions fill a wait the patient is already in.

10a 10b 10c

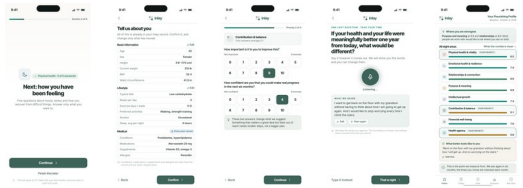

≈90 seconds · one question per domain · produces the profile and three priorities

INSERT B · AFTER SCREEN 29

The other thirty-one

Between Schedule Tests and Your Plan Is Being Reviewed, while the booked results are days away.

The patient has paid, seen their record, and booked three tests. The plan has not yet reached Dr. Patel. This is the one window where the questions visibly feed something the patient is waiting for.

29a 29b 29c 29d 29e

≈13 minutes · demographics, eight sections, then the scored baseline

inlay HEALTH

Nothing is cut. Thirty-nine questions, two sittings.

Can you judge a patient on eight questions? No — and the design never asks the eight to do it.

	INSERT A · AFTER SCREEN 10 **Eight anchors**	INSERT B · AFTER SCREEN 29 **The other thirty-one**
Questions	8 — one per domain	31 — the rest of each domain
Time	About 90 seconds	About 12 minutes, resumable
Who answers	Every patient, free or enrolled	Enrolled patients only
What it is for	Routing. Which domains matter to this person, and which three they want to work on.	Measurement. The number every later score is compared against.
What it cannot do	Detect change. A single item has no internal consistency, and a one point move sits inside the noise.	Claim validation. These are our items, not Harvard's or Diener's, so the score is only comparable to itself.
Where it goes	The app, and the patient	Dr. Patel, with the lab results

Reassessment — the full set at six and twelve months. The three priority domains only, each month. Nothing else is re-asked.

inlay HEALTH

What changed in this version

Journey_9 to Journey_12. Five screens rewritten, two removed, one moved, and the plan flow renumbered to four steps.

20	REWRITTEN	**Upgrade**	Opens with a welcome by preferred name, then the AI match: 81 plans compared, three surfaced.
21	REMOVED	**What You Get**	Six benefits, $100 monthly and the $1,020 yearly card. Pricing now lives on screen 26.
22	RENUMBERED	**Select Your Goals**	Ten goals unchanged. Step counter is now 1 of 4.
23	REMOVED	**Your Record Supports These Goals**	The goal check. Its job is now done by the AI match on screen 20.
24	MOVED	**Tell Us About You**	Out of the enrollment flow and into the flourishing set as 29b, with its figures reconciled.
25	REWRITTEN	**Establish Your Baseline**	Framed as what the record is missing. Total corrected to $467, printed as $399 before.
26	REWRITTEN	**Complete Your Enrollment**	Yearly option: 10% off membership ($1,080) and 10% off tests (−$46.70). $1,500.30 today.
27	REWRITTEN	**Payment Method**	Total follows the plan chosen on 26 — $1,500.30, not $567. Step counter is 4 of 4.

Screen numbers 21, 23 and 24 are now unused and footer page numbers skip 28, 30 and 31; the OF 45 count is stale (42 screens plus 8 inserts). One pass over the source file closes all three.
